**Subject: Utility-Related Abatement Measure Notification Report
Tufts Street Improvements Project
Tufts Street
Somerville, MA
RTN 3-51811
Atlas Project No. 600007464**

Dear Ms. Wright:

On behalf of the City of Somerville, Atlas Technical Consultants LLC (Atlas) has prepared this Utility-Release Abatement Measure (URAM) Notification letter to provide the material facts, data, and related information for the upcoming Tufts Street Improvements Project to meet the requirements of the Massachusetts Contingency Plan (MCP) at 310 CMR 40.0460. The URAM will support subsurface work taking place within the MCP Disposal Site boundary associated with Release Tracking Number (RTN) 3-23246. The project limits are shown on attached **Drawing 1** from the project's Contract Documents.

Atlas orally notified the Massachusetts Department of Environmental Protection (MassDEP) at approximately 1:30 PM on May 9, 2025, of the plan to manage soil and groundwater within the Disposal Site for RTN 3-23246 as a URAM for the City of Somerville. The MassDEP assigned RTN 3-51811 for URAM activities.

PROJECT BACKGROUND

The City of Somerville Tufts Street Improvement Project is to implement traffic calming and accessibility improvements that will reconstruct sidewalks, install new raised stormwater inlets drains and other stormwater system enhancements to improve the current stormwater management system, and repave Tufts Street between Cross Street and Washington Street as part of the City's Pavement and Sidewalk Management Program. Most excavations will be limited to 3 feet below grade with some excavations for stormwater management components extending to 5 feet below grade. Groundwater has been observed to range from approximately 7 to 13 feet below grade in the majority of the area where excavation will occur. To the extent practicable, soil will be reused in the area from which it is excavated. If groundwater needs to be managed, it will be recharged to the work area it came from. The limit of work is shown on attached **Figures 1 and 2**.

Based upon the volume of soil to be managed during the URAM, the City of Somerville has engaged Atlas to provide MCP compliance and associated Licensed Site Professional Services for this project. Michael Gitten, LSP, PE is the LSP of record for the URAM.

Most work is located within the Disposal Site listed by the MassDEP under RTN 3-23246. **Figure 1** shows the northern extent of the Disposal Site as it relates to limits of work and all the proposed work shown on **Figure 2** is within the Disposal Site. This Disposal Site is associated with a release of tetrachloroethylene, also known as perchloroethylene (PCE), to soil and groundwater from a former chemical warehouse located at the abutting 50 Tufts Street property. Based upon a review of reports submitted to the MassDEP for RTN 3-23246 Atlas concludes that the vertical extent of this Disposal Site begins just below the pavement surface and extends to at least 10 feet below grade.

It is anticipated that approximately 960 cubic yards of soil will be excavated from within the Disposal Site boundary associated with RTN 3-23246. Approximately 540 cubic yards will be returned to the location where it was excavated, and the remainder will be managed as Remediation Waste in accordance with the MCP. If groundwater is encountered and needs to be removed to facilitate stormwater system improvements, it will be recharged to the immediate subsurface location from where it is extracted in a manner that will ensure it remains within the Disposal Site boundary. Additional details on how soil and groundwater will be managed are presented below.

SITE INVESTIGATION

The Disposal Site associated with RTN 3-23246 has been investigated for more than 20 years. To supplement subsurface information from these investigations, on March 14 and 15, 2024, Atlas supervised the installation of 8 soil borings identified as ATC-1 to ATC-8 for sampling and laboratory analyses of soil to conduct in-situ pre-characterization of soil within the Tufts Street right-of-way. Locations were selected to reflect areas where soil excavation was proposed to support planned work. All detected volatile organic compounds (VOC) were below their MCP Method 1 Standards as were the detection limits for those compounds not detected. The attached Environmental Site Conditions Summary, Tufts Street Improvements Project (Atlas, May 2024) report provides additional information related to this investigation as well as a review of groundwater data generated by others from this area. Groundwater is impacted with PCE, trichloroethylene (TCE), and cis 1,2-dichloroethylene above their MCP Method 1 GW-2 standards. No exceedances of Method 1 GW-3 standards were reported.

URAM

The management of soil and groundwater within the RTN 3-23246 Disposal Site as a URAM have been incorporated into the Contract Document Specifications for 2025 Street Improvements and Additional Work Locations ("Specifications"). Relevant Specifications are attached. The following summarizes the Specification requirements and associated Item number:

In summary they require:

Scope of Work: Identifies that work within the limits of the Disposal Site for RTN 3-23246 will be subject to URAM. The Environmental Site Conditions Summary, Tufts Street Improvements Project is incorporated into the Contract Documents.

Trench Dams For Drainage Pipe, Item 158.1: Requires that bentonite Check Dams be installed a minimum of once per drainage pipe section greater than 30 feet in length to mitigate the potential for the drain pipe system to provide a preferential pathway for groundwater contamination migration.

Note that all storm drain pipe and structure connections are required to be water-tight to prevent the infiltration of groundwater.

Environmental Health and Safety Program, Item 180.01: Establish requirements for a Environmental Health and Safety Plan stamped by a Certified Industrial Hygienist and

the document incorporate the requirements of OSHA Standard 29 CFR 1910.120(b) (“HAZWOPER”) and the MCP at 310 CMR 40.0018.

Personal Protection Level C Upgrade, Item 180.02: Requires that contractor be prepared to upgrade from HAZWOPER Level D personal protection equipment (PPE) to Level C.

Disposal of Soil, Items 181.12, 181.13, and 181.14: Identifies that soil will be managed as a URAM and establishes the requirements for:

- Storing soil within the work area and at the 50 Tufts Street property,
- Performing additional soil assessment activities if required,
- Off-site soil management and associated shipping papers,
- Tracking of soil managed off-site,
- Equipment decontamination,
- Submittals to be made for review the City’s LSP that include:
 - Proposed off-site soil disposal locations;
 - Procedures soil stockpiling, transport and disposal

Management of Groundwater, Item 183.1: Identifies options and requirements for managing groundwater if encountered during construction. These options are to either:

1. Recharging groundwater to the subsurface within 25 feet of the location from which it is extracted, ensuring it does not impact local groundwater flow or leave the Disposal Site or
2. Discharges to the municipal storm drain system in compliance with MassDEP and EPA regulations including the Federal National Pollutant Discharge Elimination System (NPDES) program and associated Dewatering and Remediation General Permit (DRGP) effective August 2, 2022).

Based upon the limited amount of dewatering anticipated and information from the selected contractor, it is currently anticipated that groundwater management will occur as outlined by the first option above.

To support off-site soil managed, a Contained-On-Determination (CID) submitted May 2025, to the MassDEP to re-classify soil to be disposed off-site that is a listed hazardous waste as non-hazardous waste. The CID presents Atlas’ review of relevant soil data submitted for RTN 3-23246 that was incorporated into the URAM soil management approach. The CID is attached.

The BWSC-119 URAM Transmittal Form is submitted concurrently with this letter. A validated unsigned draft of the BWSC-119 is attached.

LIMITATIONS

The substance, content, and findings of documents and/or other deliverables made to the City of Somerville (Client) including but not limited to reports, data, memorandums, and facsimiles, are for the sole use of the Client. No reliance for the data or findings contained in these deliverables may be extended to any third party without the express written consent of Atlas. Any unauthorized use or distribution of Atlas’ work shall be at the Client’s and recipient’s sole risk and without liability to Atlas.

This report presents conditions observed and encountered at the Site on the days of Atlas’ Site work only. The information presented in this report is based on our observations in the field at the time of our Site visit; a review of reasonably ascertainable documents and data; interviews with certain designated personnel; and a review of available agency files, as referenced herein. Data was collected at a limited number of locations on the Site. Analysis was limited to those samples collected and those parameters specifically analyzed for and noted in this report. It should be noted that conditions in other portions of the property not sampled by Atlas may differ

from those that were sampled. Conclusions, recommendations, and/or opinions in this report are based on information obtained from these installations, laboratory testing results, and applicable state regulations. Any qualitative or quantitative information regarding the Site, which was not available to Atlas at the time of this assessment, may result in a modification of the representations made in this report.

If you have questions or require further information regarding the information presented in this letter, please contact Michael Gitten.

Respectfully submitted,

**Subject: Environmental Site Conditions Summary
Tufts Street Improvements Project
Tufts Street
Somerville, MA
Atlas Project No. 6000007464**

Dear Ms. Wright:

Atlas Technical Consultants LLC (Atlas) is pleased to present this report to the City of Somerville (Client) in support of the Tufts Street Improvements Project. It presents the results of a soil investigation conducted in March 2024 at the Tufts Street right-of-way where a historical release of chlorinated volatile organic compounds (cVOCs) has occurred that is listed as a disposal site by the Massachusetts Department of Environmental Protection (MassDEP) under Release Tracking Number (RTN) 3-23246 in accordance with the Massachusetts Contingency Plan (MCP; 310 CMR 40.0000). This investigation was completed in accordance with Atlas Proposal 23-10605, Change Order 01 (February 1, 2024) and Change Order 02 (March 18, 2024).

If you have questions regarding this report, please contact Stephan Landry.

Respectfully submitted,

1. BACKGROUND

The City of Somerville Tufts Street Improvement Project is planning to reconstruct sidewalks and repave Tufts Street between Cross Street and Washington Street ("Site") as part of the City's Pavement and Sidewalk Management Program. As shown on the Tufts Street Construction Concept Plan (2/9/2024) included in Appendix A, the Site includes the intersections with Cross Street, Dell Street, Glen Street, Knowlton Street, and Washington Street. As part of this project, shallow soil and groundwater less than 10 feet below grade may be generated for onsite reuse or offsite disposal.

Based upon a review of documents submitted under the Massachusetts Contingency Plan (MCP, 310 CMR 40.0000) and available on the Massachusetts Department of Environmental Protection's (MassDEP) website, the majority of the Tufts Street right of way is located within a MCP defined disposal site listed by the (MassDEP) Bureau of Waste Site Cleanup (BWSC) under Release Tracking Number (RTN) 3-23246. The horizontal extent of the disposal site is shown on the Atlas annotated August 2023 GEI Phase V ROS Site Plan (GEI Consultants Inc. (GEI), August 2023) included in Appendix B. This disposal site is associated with a release of tetrachloroethylene, also known as perchloroethylene (PCE), and 1,1,1-trichloroethane (1,1,1-TCA) to soil and/or groundwater from a former drycleaner facility located at the southwesterly abutting 50 Tufts Street property. Additional chlorinated volatile organic compounds (cVOCs) resulting from degradation of PCE and 1,1,1-TCA, particularly in groundwater, are trichloroethylene (TCE), cis 1,2-dichloroethylene (cis 1,2-DCE), 1,1-dichloroethane (1,1-DCA), and 1,1-dichloroethene (1,1-DCE). The vertical extent of this disposal site begins just below the pavement surface and extends to at least 10 feet below grade.

As presented herein, Atlas completed a soil pre-characterization and groundwater assessment within the Tufts Street right-of-way to support management of soil and groundwater in accordance with the MCP during the proposed Tufts Street improvement project.

2. HEALTH & SAFETY

Prior to execution of field activities, Atlas prepared a Site-specific Health and Safety Plan (HASP) to address potential health and safety concerns associated with site activities. Atlas prepared a Traffic Management Plan and obtained Street Occupancy-Trench-Excavation Permit #ES24-000068 from the City of Somerville.

3. UTILITY CLEARANCE AND GEOPHYSICAL SURVEY

Atlas contacted the utility notification service Dig Safe® and the local authorities to locate and surficially mark known utilities in the vicinity of the proposed pre-marked soil boring locations. These locations generally coincided with where the proposed drainage structures are shown on the Tufts Street Construction Concept Plans.

Atlas contracted with the private utility locating service Ground Penetrating Radar Systems (GPRS) to conduct a geophysical survey of the area of the proposed drilling locations to identify the locations of buried structures or utilities on the Site. GPRS conducted the survey on March 8, 2024. The GPRS report with photos and suspected utility locations identifying the subsurface utilities located during the survey is included in Appendix C.

4. SOIL CONDITIONS - MARCH 2024 SOIL INVESTIGATION

On March 14 and 15, 2024, Atlas supervised the installation of eight (8) borings (ATC-1 to ATC-8) to a depth of 10 feet below ground surface (bgs) using a direct push probe (GeoProbe) drilling system for collection and analyses of soil samples. Samples were collected for laboratory analysis to pre-characterize soil for future potential off-site disposal or on-site reuse associated with the Tufts Street Improvements Project. The drilling was conducted by Geosearch of Sterling, Massachusetts. Geosearch pre-cleared each boring location with a VacMaster unit to a depth of 5-feet below ground surface (bgs).

As shown on the Atlas annotated Tufts Street Construction Conceptual Plan (Appendix A) and August 2023 Phase V ROS Site Plan in Appendix B and, borings ATC-4 to ATC-8 are located within the disposal site while boring ATC-3 is located at the approximate northeast edge of the disposal at the intersection with Dell Street. Borings ATC-1 and ATC-2 are located outside the disposal site at the intersection with Cross Street. At each boring location, discrete soil samples were collected by hand auger during preclearing from 0 to 5 feet below grade surface and in dedicated acetate liners using a Geoprobe drill rig from 5 to 10 feet below grade surface.

Two samples were collected under the supervision of Atlas personnel each boring for a total of sixteen (16) soil samples. Soil samples from each depth interval were split in the field and a portion was placed in a plastic bag, left to stabilize, and field-screened for total volatile organic compounds (TVOCs) using a photoionization detector (PID). The second portion of the soil sample was placed into laboratory provided glassware for laboratory analysis.

Atlas visually classified soils at each depth interval using the Modified Burmister Soil Classification Method as noted in the descriptions on boring logs provided in Appendix D. Soils were generally observed to consist of fine to medium or fine to coarse grained sand, with evidence of fill in some locations, between 0 to 6 feet below grade underlain by either a fine to medium/coarse sand or a silt or clay.

Wet soils near the apparent groundwater table were observed in soils between 5.5 to 8 feet bgs. As explained further in the groundwater conditions section below, the historical groundwater elevation measurements from groundwater monitoring wells located in Tufts Street have been generally between 8 to 13 feet below grade.

The sixteen samples were all collected in laboratory provided containers and submitted to Eurofins laboratory under a chain of custody for analyzed for low level volatile organic compounds (VOCs) by EPA Method 8260. As presented in Table 1 Tufts Street Borings Soil Analytical Summary Table, laboratory results ranged from non-detect for all VOCs at 15 of 16 samples. The only detected compound was TCE at 0.0314 milligrams per kilogram (mg/kg) at boring ATC-8, 5-10 feet below grade surface. This is concentration well below the MCP RCS-1 value of 1 mg/Kg. RCS-1 is applicable because the Site is within a residential neighborhood.

In additions to the above described discrete soil analyses of VOCs by 8260, two sets of composite soil samples, one set (ATC-1 to ATC-8 Composite 0-5') from the 0 to 5 foot below grade surface interval of the 8 borings and the other set (ATC-1 to ATC-8 Composite 5-10') from the 5 to 10 foot below grade surface interval of the 8 borings, were submitted in properly preserved laboratory provided containers to Eurofins laboratory for the following analyses typically required by soil management facilities for disposal or recycling: Semi-VOCs with low level PAHs (SIMS) by EPA Method 8270; PCBs by EPA Method 8082; RCRA 8 Metals; TCLP lead; Total Petroleum Hydrocarbons by 8100; Corrosivity; Total Organic Carbon; Flashpoint; Reactivity Cyanide and Sulfide; and Conductivity.

As summarized in the attached Tufts Street Borings Soil Analytical Summary table, the results of the soil analyses did not detect any analytes above their respective MCP RCS-1 reportable concentrations nor exhibit any characteristics of hazardous waste pursuant to 310 CMR 30.120. The only soil sample that contained a detectable concentration of a VOC was ATC-8, 5-10' where PCE at 0.0134 mg/Kg was reported. In addition, the laboratory method reporting limits for all the disposal site VOCs were below their respective RCS-1 reportable concentrations. The laboratory report is included in Appendix E.

The results of the VOC and other soil analytical parameters indicate that, pending the approval or 21-day presumptive approval from MassDEP of a Contained-In-Determination (CID) Petition, the soil from both within and outside the MCP Site portion of Tufts Street can be managed as a non-hazardous waste and would meet the acceptance criteria under MassDEP policy #Comm-97-001 for disposal as a regulated material to a Massachusetts Lined or Unlined Landfill. See Section 6.1 for additional information related to the CID Petition.

5. GROUNDWATER CONDITIONS

During the March 14-15, 2024, boring soil sampling activities wet soils were observed between 5.5 to 8 feet bgs. This is assumed to be near the top of the apparent groundwater table. Historical groundwater elevations from six groundwater monitoring wells located in Tufts Street, as shown on the Atlas annotated Monitoring Well Location plan from the August 2023 Phase V ROS in Appendix B, have been measured between 8 to 13 feet below grade. Table 9-1 from the August 2023 Phase V ROS(GEI) presented in Appendix F shows that the historical groundwater elevation measurements were as follows:

- MW-106 (11.38 to 12.19 feet below grade);
- MW-109 (10.41 to 12.15 feet below grade);
- MW-110 (1.1 to 2.8 feet below grade);
- GEO-4 (9.26 to 13.02 feet below grade);
- GEO-5 (7.55 to 12.79 feet below grade); and
- GEO-6 (7.39 to 12.75 feet below grade).

The depth to groundwater was very shallow (1.1 to 2.5 feet below grade) at well MW-110, which is located at the intersection with Knowlton Street near borings ATC-7 and ATC-8. This higher groundwater elevation may be due to a perched groundwater condition sometimes associated with clay soils. Coincidentally, clay soils were observed at approximately 6 feet below grade at borings ATC-7 and ATC-8.

The results of groundwater analyses for VOCs from the monitoring wells located in Tufts Street were from samples collected between 2004 and 2008, as summarized from the Table 4-2 from the August 2023 Phase V ROS included in Appendix F, VOCs detected in groundwater during this period from these wells ranged as follows:

GEO-4 (2004-2007)

- PCE: **24,000 to 8,200** ug/L
- TCE: **235 to 75** ug/L
- Cis 1,2-DCE: 16.7 to 5.5 ug/L
- 1,1,1-TCA: 113 to 70 ug/L
- 1,1-DCA: 7.1 to 2.7 ug/L
- 1,1-DCE: 6.1 to 17.8 ug/L

GEO-5 (2004-2007)

- PCE: **14,400** to 18 ug/L
- TCE: **446** to <1 ug/L
- Cis 1,2-DCE: **35** to <1 ug/L
- 1,1,1-TCA: 652 to <1 ug/L
- 1,1-DCA: 9.7 to 3.0 ug/L
- 1,1-DCE: 32.7 to 8.9 ug/L

GEO-6 (2004-2007)

- PCE: **1,980** to **487** ug/L
- TCE: **131** to **70** ug/L
- Cis 1,2-DCE: 15 to 6.3 ug/L
- 1,1,1-TCA: 77 to 26 ug/L
- 1,1-DCA: 4.4 to 0.92 ug/L
- 1,1-DCE: 11 to 2.8 ug/L

MW106 (2007-2008)

- PCE: 3 to 1 ug/L
- TCE: 4.9 to 1.2 ug/L
- Cis 1,2-DCE: **252** to 5 ug/L
- 1,1,1-TCA: 15 to 2 ug/L
- 1,1-DCA: <1.0 ug/L
- 1,1-DCE: 6.3 to 1.5 ug/L

MW109 (2007-2008)

- PCE: **178** to 17 ug/L
- TCE: 4.5 to 0.5 ug/L
- Cis 1,2-DCE: <1 ug/L
- 1,1,1-TCA: 1 to <1 ug/L
- 1,1-DCA: 1.2 to <1 ug/L
- 1,1-DCE: <1 ug/L

MW110 (2007)

- PCE: 0.93 ug/L to <1 ug/L
- TCE: <1 ug/L
- Cis 1,2-DCE: <1 ug/L
- 1,1,1-TCA: <1 ug/L
- 1,1-DCA: <1.0 ug/L
- 1,1-DCE: <1.0 ug/L

Groundwater concentrations that are greater than (>) the current MCP Method 1 GW-2 standards are bolded and underlined. There are no exceedances of Method 1 GW-3 standards.

Based on the concentrations of chlorinated VOCs detected in groundwater along as summarized here, groundwater that may need to be managed to accommodate installation of drainage structures may be either reinfiltrated adjacent to the approximate same area it is generated within the disposal site or transported off-site for disposal using a Uniform Hazardous Waste Manifest.

6. MCP COMPLIANCE

The following activities are required to comply with the MCP for that portion of the proposed work within the disposal site associated with RTN 3-23246.

6.1 Contained In Determination (CID) Petition

The only cVOC detected in soil from the March 14-15, 2024, sampling at Tufts Street was PCE at 0.0134 mg/Kg from boring ATC-8, 5'-10'. Since the total concentration of cVOCs is less than 1 parts per million or 1 mg/Kg, and other soil data indicates that there are no other hazardous waste characteristics associated with soils within Tufts Street, this soil may be classified as non-hazardous in Massachusetts with approval or 21-day presumptive approval of a Contained In Determination (CID) Petition from MassDEP. A CID petition provided in Appendix G will be submitted to MassDEP to classify up to 750 cubic yards of soil within disposal site area of Tufts Street as non-hazardous.

6.2 Utility-related Release Abatement Measure (URAM)

Management of soil and groundwater within the disposal site portion of the Tufts Street project, will need to be managed under a Utility-related Release Abatement Measure (URAM) in accordance with 310 CMR 40.0460 of the MCP. This disposal site to which the URAM applies is shown on plans in Appendix B. A Licensed Site Professional will be required since more than 20 cubic yards of soil impacted by a hazardous waste will be managed. URAM activities shall not be undertaken by a person performing construction activities until after that person has notified the MassDEP orally or in writing after which the URAM Plan will need to be submitted to MassDEP. MassDEP notification of the URAM activities will prompt MassDEP to issue a RTN specific to the Tufts Street URAM soil and groundwater management activities. The proposed URAM soil and groundwater management activities are to be presented in a URAM Plan per 310 CMR 40.0444, followed by site activity updates in a URAM Status Report per 40.0445 approximately 120-days after submittal of the URAM Plan and each 6-months thereafter until such time a URAM Completion Report per 40.0446 summarizing the results and completion of the soil and groundwater management activities has been submitted to MassDEP.

As noted above, MassDEP approval or 21-day presumptive of a CID Petition will be required to support the soil management portion of the URAM activities. The CID Petition will allow for onsite reuse and/or off-site disposal or recycling of Tufts Street soils as non-hazardous classified soils to an in-state or out-of-state landfill or recycling facility. Disposal or recycling of soil from *within the disposal site portion Tufts Street between Dell Street and Washington Street* may be transported off-site to an in-state or out-of-state licensed facility under a MassDEP Bill of Lading or non-hazardous uniform waste manifest. Disposal or recycling of soil from *outside the disposal site portion of Tufts Street between Dell Street and Cross Street* may be transported off-site to an in-state or out-of-state licensed facility under a MassDEP Bill of Lading (BOL), non-hazardous

uniform waste manifest, or material shipping record (MSR). Soils within the disposal site portion Tufts Street may not be reused outside the disposal site but soils outside the disposal may be reused within the disposal site portion of Tufts Street.

If groundwater is encountered during installation of drainage structures and dewatering is required, the URAM Plan will need to provide for alternative methods to manage groundwater such as for example, onsite treatment and disposal, on-site re-infiltration, and/or offsite disposal as hazardous waste using a vacuum truck. Note that discharge of disposal site groundwater to the municipal sewer system, which is part of the Massachusetts Water Resources Authority (MWRA) district, is not allowed by the MWRA. Groundwater dewatering from within the disposal site that is to be re-infiltrated must stay within that disposal site area while groundwater dewatering from outside the disposal site may be re-infiltrated inside or outside the disposal site. The facility to which groundwater from the Tufts Street would be transported for disposal may require testing and documentation for acceptance.

LEGEND:

- ⊕ MONITORING WELL INSTALLED BY TRC, 2014
- ⊙ BORING BY KLEINFELDER, MARCH 2014 AND APRIL 2014
- MONITORING WELL BY KLEINFELDER, SEPTEMBER 2012, MARCH 2014, AND APRIL 2014
- ⊖ MONITORING WELL WITH SOIL VAPOR SAMPLE PORT INSTALLED BY GEI, JANUARY 2007 - JANUARY 2008
- ⊙ MONITORING WELL INSTALLED BY GEI, MAY 2006
- ⊙ MONITORING WELL INSTALLED BY OTHERS
- ⊙ PREVIOUSLY INSTALLED IRRIGATION WELL
- ⊗ GLXC WELL INSTALLED AUGUST 2020
- ⊙ WELLS IN GRAY HAVE BEEN DESTROYED OR DECOMMISSIONED
- x — CHAIN LINK FENCE
- 138 ROOM NUMBER AT CAPUANO SCHOOL
- BOUNDARY OF COMMUNITY GARDENS
- 84 STREET ADDRESS
- MBTA = MASSACHUSETTS BAY TRANSPORTATION AUTHORITY
- MONITORING WELL SAMPLED BY GEI DURING THIS REPORTING PERIOD

- GENERAL NOTES:**
1. MONITORING WELL LOCATIONS AND ELEVATIONS, AND CAPUANO CENTER COMMUNITY GARDEN LOCATIONS WERE ESTABLISHED BY ON THE GROUND SURVEYS BY BSC GROUP, INC.
 2. HORIZONTAL CONTROL FOR THIS PLAN WAS ESTABLISHED BY GPS AND IS BASED ON THE NORTH AMERICAN DATUM OF 1983.
 3. VERTICAL CONTROL FOR THIS PLAN WAS ESTABLISHED BY GPS AND IS BASED ON THE NORTH AMERICAN VERTICAL DATUM OF 1988.
 4. STREET PROPERTY LINES, AND BUILDINGS ARE BASED ON SOMERVILLE ASSESSORS MAPS AND ARE BEST FIT RELATIVE TO THE LOCATION OF THE 50 TUFTS ST. BUILDING.
 5. GEI OBSERVED ABANDONMENT OF SH-MW1 AND SH-1 THROUGH SH-5 IN 2007.

JOB DETAILS

Jobsite Location	Tufts Street, Somerville, Massachusetts, 02145
Work Order Number	Work Order #638432
Job Number	
PO Number	6000007464

GPRS Project Manager: Michael Layon

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS project manager on this project.

EQUIPMENT USED

The following equipment was used on this project:

- **Underground GPR Antenna:** This GPR Antenna uses frequencies ranging from 250 MHz to 450 MHz and is mounted in a stroller frame that rolls over the surface. Data is displayed on a screen and marked in the field in real time. The surface needs to be reasonably smooth and unobstructed to obtain readable scans. Obstructions such as curbs, landscaping, and vegetation will limit the efficacy of GPR. The total effective scan depth can be as much as 8' or more with this antenna but can vary widely depending on the soil conditions and composition. Some soil types, such as clay, may limit maximum depths to 3' or less. As depth increases, targets must be larger to be detected, and non-metallic targets can be challenging to locate. The depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. For more information, please visit: [Link](#)
- **EM Pipe Locator:** Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. For more information, please visit: [Link](#)
- **GPS:** This handheld unit offers accuracy down to 4 inches; however, the accuracy achieved will depend on the satellite environment at the time of collection and is not considered survey-grade. Features can be collected as points, lines, or areas and then exported as a KML/KMZ or overlaid on a CAD drawing. For more information, please visit: [Link](#)

JOB SUMMARY REPORT

WORK PERFORMED

UNDERGROUND UTILITY

Client Provided Drawings	No
Client completed 811 locate request	Yes
Scope of Work	Scan for utilities a 20'x20' area around 8 soil boring locations along Tufts st in Somerville MA. Mark, map and document findings.
Soil Borings (qty)	10
Limitations Encountered	- Surface obstructions - Utilities too deep to locate
Limitations Encountered - Other	see notes
Marking Medium	- Spray Paint
Results Notes	The following findings were found within the ~20' scan radius around 8 soil borings: ATC-1 (area 7): Gas line located via GPR by trench line data at an unknown depth. Water line was located ~4'-5'. Electrical line was located ~2'-3'. Communication line was identified, no depth available. Max GPR depth was found to be ~2'. ATC-2 (area 6): Gas line ~2'-3'. Water line ~3'-4'. Electrical line ~2'-3'. Unknown line ~1'-2'. Max GPR depth was found to be ~2'. ATC-3 (area 5): Gas line could not be confirmed in this location due to pipe composition and could not induce a signal. Water line ~5'-6'. Sanitary/storm line depth could not be confirmed due to depth of line. Unknown manhole filled with water, could not determine depth or direction. Power pole with no drops. Debris on sidewalk limited scanning ability in sidewalk area. Max GPR depth was found to be ~1'. ATC-4/5 (area 4): Gas line ~1'-2'. Water line 5'-6'. Storm lines ~2'-3'. Sanitary line ~9'-10'. Max GPR depth was found to be ~2'. ATC-6 (area 3): Gas line ~1'-2'. No power detected. Max GPR depth was found to be ~2'. ATC-7 (area 2): Gas line ~1'-2'. No power detected. Max GPR depth was found to be ~1.5'. ATC-8 (area 1): Electrical line ~2'-3'. Communication line ~1'-2'. Max GPR depth was found to be ~2'. Due to limitations mentioned above (limited GPR data depth, debris), client is advised to proceed with caution outside scan area, near any marked lines and below GPR depth. For more site pictures and information please refer to associated mapping.

APPENDIX E

LABORTORY REPORT

ANALYTICAL REPORT

PREPARED FOR

Attn: Stephan Landry
Atlas Technical Consultants LLC
10 State St
Suite 100
Woburn, Massachusetts 01801

Generated 4/3/2024 2:47:08 PM Revision 1

JOB DESCRIPTION

Tufts Street Improvement - Somerville, M

JOB NUMBER

620-17450-1

Eurofins New England

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Authorization

Authorized for release by
Agnes Huntley, Project Manager
Agnes.Huntley@et.eurofinsus.com

Job ID: 620-17450-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

MassDEP Analytical Protocol Certification Form

Laboratory Name: Eurofins New England

Project #: 620-17450-1

Project Location: Tufts Street Improvement - Somerville, M

RTN:

This Form provides certifications for the following data set: list Laboratory Sample ID Number(s):
620-17450-1 through 620-17450-18

Matrices: ☒ Groundwater/Surface Water ☒ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below:)

8260 VOC CAM II A ☒	7470/7471 Hg CAM III B ☒	MassDEP VPH (GC/PID/FID) CAM IV A ☐	8082 PCB CAM V A ☒	9014 Total Cyanide/PAC CAM VI A ☐	6860 Perchlorate CAM VIII B ☐
8270 SVOC CAM II B ☒	7010 Metals CAM III C ☐	MassDEP VPH (GC/MS) CAM IV C ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
6010 Metals CAM III A ☒	6020 Metals CAM III D ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐

Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☒ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☒ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☒ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☒ Yes ☐ No
E	VPH, EPH, APH, and TO-15 only a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☒ Yes ☐ No

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☒ Yes ☐ No ¹
----------	---	--

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	☐ Yes ☒ No ¹
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☒ No ¹

¹ All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, is accurate and complete.

Eurofins New England

Job Narrative 620-17450-1

REVISION

The report being provided is a revision of the original report sent on 3/28/2024. The report (revision 1) is being revised due to Report revised as client needed full list 8270 with low-level PAHs.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 3/18/2024 3:25 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.4°C.

GC/MS VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

Method 8270MCP: The following analytes have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: Benzidine and Benzoic acid. These analytes may have a %D >50%.

Method 8270MCP: The laboratory control sample (LCS) for preparation batch 620-32927 and analytical batch 620-32951 recovered outside control limits for the following analytes: 4-Chloroaniline, Aniline, Benzidine, Benzoic acid and Pyridine. The affected target analytes recovered within acceptance limits, >10%, per MCP criteria therefore, demonstrates the analytical system had sufficient sensitivity to detect the compounds had they been present. Since the affected target compounds were not detected in the samples, the data have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 6010MCP: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 620-33090 and analytical batch 620-33178 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010MCP: The sample duplicate (DUP) precision for preparation batch 620-33090 and analytical batch 620-33178 was outside control limits. Sample non-homogeneity is suspected.

Method 6010MCP: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 620-33090 and analytical batch 620-33178 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins New England

Case Narrative

Client: Atlas Technical Consultants LLC
Project: Tufts Street Improvement - Somerville, M

Job ID: 620-17450-1

Job ID: 620-17450-1 (Continued)

Eurofins New England

General Chemistry

Method 1010A: The Pensky Martens closed cup apparatus is designed to determine the flash point of a liquid sample. The sample submitted could not be mixed well enough to obtain uniform heating. The temperature being measured was that of the material near the top of the cup. The material at the bottom of the cup could have a higher temperature. The temperature reported may not be accurate.

Method Moisture: The sample duplicate (DUP) precision for analytical batch 620-32837 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

CHAIN OF CUSTODY RECORD

Special Handling:

- ☒ Standard TAT - 7 to 10 business days
- ☐ Rush TAT - Date Needed

All TATs subject to laboratory approval
Min 24-hr notification needed for rushes
Samples disposed after 30 days unless otherwise specified

List Number: 1

Creator: Scott, Krishnan F

Question	Answer	Comment
Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable, where thermal pres is required ($\leq 6^{\circ}\text{C}$, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temp acceptable, where thermal pres is required ($\leq 6^{\circ}\text{C}$, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
Sample custody seals are intact.	N/A	
VOA sample vials do not have headspace $> 6\text{mm}$ in diameter (none, if from WV)?	N/A

- General Notes:
- ft = feet.
 - bgs = below ground surface.
 - ID = identification.
 - GW = groundwater.
 - NAVD = North American Vertical Datum of 1988.
 - The top of the PVC riser was used as the measuring point for depth to groundwater.
 - "--" = Well not yet installed, abandoned, or not measured.

- General Notes:
- ft = feet.
 - bgs = below ground surface.
 - ID = identification.
 - GW = groundwater.
 - NAVD = North American Vertical Datum of 1988.
 - The top of the PVC riser was used as the measuring point for depth to groundwater.
 - "--" = Well not yet installed, abandoned, or not measured.

- General Notes:
- ft = feet.
 - bgs = below ground surface.
 - ID = identification.
 - GW = groundwater.
 - NAVD = North American Vertical Datum of 1988.
 - The top of the PVC riser was used as the measuring point for depth to groundwater.
 - "--" = Well not yet installed, abandoned, or not measured.

- General Notes:
1. ft = feet.
 2. bgs = below ground surface.
 3. ID = identification.
 4. GW = groundwater.
 5. NAVD = North American Vertical Datum of 1988.
 6. The top of the PVC riser was used as the measuring point for depth to groundwater.
 7. "--" = Well not yet installed, abandoned, or not measured.

**Table 4-2. Chemical Testing Results - GEI Groundwater Sampling
Phase V Status Report No. 24 and Remedial Monitoring Report No. 39
50 Tufts Street
Somerville, Massachusetts**

[illegible]

General Notes:

1. Analytes detected in at least one sample are reported here. For a complete list of analytes refer to the laboratory data reports.
2. ft bgs = feet below ground surface.
3. µg/l = micrograms per liter.
4. " $<$ " = The Analyte was not detected at a concentration above the specified reporting limit.
5. SHA = Sanborn Head & Associates.
6. FD = Field Duplicate Sample.
7. NT = Not Tested.

Qualifying Notes:

- | | |
|----|---|
| B | The analyte found in associated method blank. |
| C+ | The result has a high bias due to surrogate spike recovery above upper control limits |
| E | The value exceeds the calibration range. |
| F+ | The result has a high bias due to matrix spike recovery above upper control limits. |
| F- | The result has a low bias due to matrix spike recovery below lower control limits. |
| G | The result is estimated due to duplicate precision outside control limits. |
| J | The reported result is below the laboratory reporting limit and is estimated. |
| J+ | The reported result is estimated. |
| K- | The result has a low bias due to blank spike or laboratory control sample recovery below lower control limits. |
| K+ | The result has a high bias due to blank spike or laboratory control sample recovery above upper control limits. |
| R | The result is rejected due to gross exceedence of minimum response factor criteria. |

[illegible]

General Notes:

1. Analytes detected in at least one sample are reported here. For a complete list of analytes refer to the laboratory data reports.
2. ft bgs = feet below ground surface.
3. µg/l = micrograms per liter.
4. " $<$ " = The analyte was not detected at a concentration above the specified reporting limit.
5. SHA = Sanborn Head & Associates.
6. FD = Field Duplicate Sample.
7. NT = Not Tested.

Qualifying Notes:

- | | |
|----|---|
| B | The analyte found in associated method blank. |
| C+ | The result has a high bias due to surrogate spike recovery above upper control limits |
| E | The value exceeds the calibration range. |
| F+ | The result has a high bias due to matrix spike recovery above upper control limits. |
| F- | The result has a low bias due to matrix spike recovery below lower control limits. |
| G | The result is estimated due to duplicate precision outside control limits. |
| J | The reported result is below the laboratory reporting limit and is estimated. |
| J+ | The reported result is estimated. |
| K- | The result has a low bias due to blank spike or laboratory control sample recovery below lower control limits. |
| K+ | The result has a high bias due to blank spike or laboratory control sample recovery above upper control limits. |
| R | The result is rejected due to gross exceedence of minimum response factor criteria. |

APPENDIX G

CID PETITION

10 State Street, Suite 100
Woburn, MA 01801
781.932.9400 | oneatlas.com

May 10, 2024

DRAFT

Massachusetts Department of Environmental Protection
Bureau of Waste Site Cleanup
150 Presidential Way
Woburn, Massachusetts

**SUBJECT: Contained-In Determination
Soil from Tufts Street Right-of-Way
RTN 3-23246**

Dear Program Manager,

On behalf of City of Somerville, I have made a “contained-in” determination following the approach presented in the MassDEP’s Technical Update, Considerations for Managing Contaminated Soil: RCRA Land Disposal Restrictions and Contained-In Determination (2010) regarding soil from a portion of the following M.G.L. c. 21E disposal site:

RTN: 3-23246
Site Name: 50 Tufts Street and Property Across Street
Street Address: Tufts Street right-of-way
City/Town: Somerville, MA
Zip Code: 02145

The soil contained the listed hazardous waste constituent(s) with waste code U210, which MassDEP is authorized to regulate under the Resource Conservation and Recovery Act (RCRA) by the U.S. Environmental Protection Agency (USEPA). However, the soil (check one):

- ☒ Met all applicable S-1 standards upon removal*; or
☐ Was treated through a method of treatment other than dilution so as to meet all applicable S-1 standards.

*The soil noted herein has been pre-characterized in-situ and has been determined to meet applicable S-1 standards.

The levels of the listed hazardous waste constituents in the generated soil are:
Summary of Detected Listed Waste within Contained-In Determination

Sample ID	Sample Date	Substance/Compound	Results (ppm)	Applicable MCP Method 1 S-1 Standard		
				S-1 Soil & GW-1	S-1 Soil & GW-2	S-1 Soil & GW-3
ATC-8, 5'-10'	3/14/2024	Tetrachloroethylene (127-18-4)	0.0134	1 ppm	10 ppm	30 ppm

The City of Somerville Tufts Street Improvement Project is planning to reconstruct sidewalks and repave Tufts Street between Cross Street and Washington Street as part of the City's Pavement and Sidewalk Management Program. As part of this project soil less than 10 feet below grade will be generated for offsite disposal primarily from the installation of drainage structures and sidewalks. As shown on the attached Atlas annotated Phase V ROS Site Plan (GEI, August 2023), the majority of Tufts Street right of way is located within a disposal site listed by the Massachusetts Department of Environmental Protection (MassDEP) Bureau of Waste Site Cleanup (BWSC) under Release Tracking Number (RTN) 3-23246. This disposal site is associated with a release of tetrachloroethylene, also known as perchloroethylene (PCE), to soil and groundwater from a former drycleaner facility located at the abutting 50 Tufts Street property. The vertical extent of the disposal site begins just below the pavement surface and extends to at least 10 feet below grade.

On March 14 and 15, 2024, Atlas supervised the installation of 8 borings for sampling and laboratory analyses of soil to conduct in-situ pre-characterization of soil within Tufts Street for future potential off-site disposal associated with the Tufts Street Improvements Project. Two soil samples from each boring, for a total of sixteen (16) soil samples were collected under the supervision of Atlas from borings identified as ATC-1 to ATC-8 within the Tufts Street right-of-way between Cross Street and Washington Street. As shown on the attached August 2023 Phase V ROS Site Plan and Atlas annotated Tufts Street Construction Concept Plan, borings ATC-4 to ATC-8 are located within the disposal site while boring ATC-3 is located at the approximate northeast edge of the disposal and borings ATC-1 and ATC-2 are located outside the disposal site. At each boring location, discrete soil samples were collected by hand auger during preclearing from 0 to 5 feet below grade surface and in dedicated acetate liners using a Geoprobe drill rig from 5 to 10 feet below grade surface.

Soil samples from each boring were screened for total volatile organic compounds (VOCs), i.e., headspace, with a pre-calibrated photoionization detector (PID) in accordance with the MassDEP jar headspace method.

The sixteen samples were placed in laboratory provided containers and submitted to Eurofins laboratory under a chain of custody for analyzed for low level volatile organic compounds (VOCs) by EPA Method 8260. As summarized in the attached Tufts Street Borings Soil Analytical Summary table, the results were non-detect for all VOCs at 15 of 16 samples. Only PCE at 0.0314 milligrams per kilogram (mg/kg) was detected in soil from boring ATC-8, 5-10 feet below grade surface.

In addition to the above described discrete soil analyses of VOCs by 8260, two sets of composite soil samples, one set (ATC-1 to ATC-8 Composite 0-5') from the 0 to 5 foot below grade surface interval and the other set (ATC-1 to ATC-8 Composite 5-10') from the 5 to 10 foot below grade surface interval from each of the 8 borings, were submitted in properly preserved laboratory provided containers to Eurofins laboratory for the following analyses typically required by soil management facilities for disposal or recycling at those facilities: Semi-VOCs with low level PAHs (SIMS) by EPA Method 8270; PCBs by EPA Method 8082; RCRA 8 Metals; TCLP lead; Total Petroleum Hydrocarbons by 8100; Corrosivity; Total Organic Carbon; Flashpoint; Reactivity Cyanide and Sulfide; and Conductivity.

As presented in the Tufts Street Borings Soil Analytical Summary table, the results of the soil analyses do not exhibit any characteristics of hazardous waste pursuant to 310 CMR 30.120. The only soil sample that contained a detectable concentration of PCE (0.0134 mg/Kg at ATC-8, 5-10') as well the other soil analyses for the disposal site VOCs whose laboratory method reportable limits were also below S-1 standards within the disposal site area are eligible for a contained-in determination.

The soil management activities associated with this CID Petition will be conducted as a Utility-related Release Abatement Measure (URAM).

I understand that this "contained-in" determination is subject to a 21-day period during which the determination is subject to review by the MassDEP and that the soil cannot be handled as non-hazardous waste until the 21-day review period passes without objection from MassDEP or USEPA.

I also understand that if the soil is to be transported out-of-state, it must first be determined if the operator of the landfill or other receiving facility and the relevant state agency (or the relevant USEPA region, if the state does not administer the RCRA program) are willing to accept contained-in determinations performed by a

Massachusetts Licensed Site Professional. In doing so, the process by which “contained-in” determinations are performed in Massachusetts will be explained to the relevant parties and proper documentation of all conversations will be retained.

I, Stephan Landry, attest under the pains and penalties of perjury (i) that I have personally examined and am familiar with the information contained in this submittal, including any and all documents accompanying this submittal, (ii) that, based on my inquiry of those individuals immediately responsible for obtaining the information, the material information contained in this submittal is, to the best of my knowledge and belief, true, accurate and complete, and (iii) that I am fully authorized to make this attestation on behalf of the person or entity legally responsible for this submittal. I/the person or entity on whose behalf this submittal is made am/is aware that there are significant penalties, including, but not limited to, possible fines and imprisonment, for willfully submitting false, inaccurate or incomplete information.

Respectfully submitted,

SPECIFICATIONS FOR 2025 TUFTS STREET IMPROVEMENTS PROJECT AND ADDITIONAL WORK LOCATIONS

SCOPE OF WORK

The work to be performed under this contract shall consist of the reconstruction of Tufts Street and select intersections, sidewalk and specific repairs at select locations, and mill & overlay of a public street in Somerville, Massachusetts.

1. The reconstruction of Tufts Street extending from Washington Street to Cross Street. See **Attachment A** for Complete Streets Improvement Plans
 - a. Tufts Street is a known location for contaminated soil, see **Attachment B** for Environmental Site Conditions Summary Tufts Street Improvements Project
 - b. Storage area for the contaminated soils will be provided by the City within ¼ mile of project area.
 - c. Licensed Site Professional (LSP) Services will be provided by the City.
2. Sidewalk replacement following locations. See **Attachment C** for limits of reconstruction.
 - a. Webster Avenue
 - b. Knowlton Street
3. Accessible Curb Ramps and Crossings at the following locations. Select locations also include crosswalks. See **Attachment D** for more detail on ramp and crosswalk location.
 - a. 68 Glen Street
 - b. Benedict Avenue
 - c. Clark Street and Newton Street
 - d. Franklin Street and Oliver Street
 - e. Glen Street and Fountain Avenue
 - f. Glen Street and Webster Street
 - g. Concord Avenue
4. Accessible parking Ramp at the following location. See **Attachment E** for more detail on ramp location.
 - a. Bonair Street
5. A total of 20 HMA Speed Humps at locations to be determined by the engineer

The work includes excavation, gravel borrow, grading, drainage modifications, manhole adjustments, drainage inlet reconstruction, curb removal and resetting, curb extensions, installation of MAAB/ADA compliant curb cuts, crosswalk lines, stop lines, colored lane markings and all other incidental work listed in the proposal. Layout and design plans will be provided following notice to proceed where substantive change to the existing street layout is proposed.

PROVISION FOR TRAVEL AND PROSECUTION OF THE WORK

The street and adjacent side streets shall remain open to travel throughout the period required for the completion of the improvement except as permitted by the City of Somerville Traffic Commission. Reasonable facilities shall be provided by the Contractor for the convenient and safe passage of pedestrians through the project and also to and from properties abutting the

improvement. Reasonable facilities shall also be provided by the Contractor to ensure that all businesses remain accessible during business hours. Particular care shall be taken at all times to establish and maintain such methods of procedure as will not create hazards of an unusual nature.

LIMITATIONS OF OPERATIONS

The Contractor shall conduct the work at all times in such a manner and in such sequence as will assure the least interference with traffic and abutters. The Contractor shall have due regard to the location of detours and to the provisions for handling traffic. The Contractor shall not open up work to the prejudice or detriment of work already started. The Contractor shall have due regard to the potential conflict between existing features (e.g., pavement markings, signs, curb, etc.) and interim/proposed features (e.g., pavement markings, signs, curb, etc.) and shall provide temporary transitions between those features that results in reasonably safe and convenient travel in accordance with Subsection 7.09: Public Safety and Convenience of the Standard Specifications.

WORK SCHEDULE

Work on this project is mainly restricted to a ten-hour day, five-day week with the Prime Contractor and all subcontractors working on the same shift from 7am to 5pm. Peak hour work restrictions may apply as specified in the Street Permit or as directed by the Engineer.

Project includes biweekly project meetings between the Contractor, subcontractor(s), project engineer and City Engineer. The frequency and location will be determined by the City Engineer during the project and may be changed as construction progresses.

LIQUIDATED DAMAGES

Delays to due to the cancellation of work, not including of inclement weather, will be subject to the assessment of liquidated damages as outlined below. A verbal warning will be given to the Contractor's supervisor and a written warning will be sent to the Contractor for the first offense. Every offense thereafter will be penalized as follows:

1. The Contractor agrees that the City of Somerville may retain the sum of \$250.00 from the amount of the compensation for the each 60 minutes (1 hour) of late arrival by the contractor at the predetermined meeting location.
2. Any cancellation by the Contractor within five hours of a scheduled shift will result in the Contractor compensating the Engineering Department for a sum of \$2,000.00.
3. If the Contractor hasn't completed any shifts for a total of two weeks in the same construction season due to inadequate personnel availability, then damages may be assessed for subsequent weeks without completed work due to inadequate workforce availability occurring at a weekly rate of \$4,000.00.

If the Contractor has an outstanding invoice with the City of Somerville, the corresponding sums from liquidated damages mentioned above will be deducted from that invoice, otherwise the Contractor shall remit this payment within fourteen calendar days.

DISPOSAL OF SURPLUS MATERIAL

Surplus material, unless excavated from the known contaminated areas ad outlined in Attachment B, resulting from the various kinds of excavation and not required for use on the project shall be disposed of by the Contractor, outside the project limits, at their own responsibility and without additional compensation thereof.

REMOVAL AND DISPOSAL OF STRUCTURES AND OBSTRUCTIONS

The Contractor shall accept and hold entire responsibility for the stacking and protection of materials that have been removed from the site and that are to be reused in the work. Any materials lost or damaged through lack of protection or carelessness by the Contractor shall be replaced at their expense.

SEQUENCE OF WORK

Provide a monthly work schedule for the entire project at the beginning of the project. Provide a weekly schedule for the next two months of work. Update schedule biweekly.

After a street is cold planed/milled, it shall remain open for a maximum of five (5) working days prior to repaving. After removal of sidewalk, it shall remain open for a maximum of ten (10) working days prior to replacement. However, due to special circumstances, this requirement may be waived by the City Engineer.

Construction sequence for sidewalk and accessible ramp construction shall be set to provide an accessible path consistent with the existing pedestrian facility that is disrupted or closed with the following expectations:

1. Sidewalk construction within a block shall be limited to one side of the road at a time.
2. Accessible pedestrian ramp construction shall be limited to one corner of an intersection at a time.
3. At the end of every working day, the Contractor shall ensure an accessible route is present.
4. A Pedestrian Management Plan shall be submitted for review two weeks prior to first scheduled sidewalk removal/obstruction. The Pedestrian Management plan shall be both narrative and graphical and shall be specific to the streets and intersections of the Project. The Pedestrian Management Plan shall provide requirements to meet (e.g. continuous accessible route through Project at all times, etc.).
5. Shop Drawings: Within 30 days after the date of the Notice To Proceed, the Contractor shall submit shop drawings for signal supports, a list of equipment, and manufacturer's equipment specifications to the Engineer in accordance with the relevant provisions of Section 815.20. No work shall commence by the Contractor until approval of the shop drawings and manufacturer's data has been received in writing from the Engineer. Approval of these drawings will be general in character and shall not relieve the Contractor from the responsibility of, or the necessity of, furnishing materials and workmanship conforming to the plans, standard specifications, and these special provisions.

Per MassDOT Standard Details for the Development of Temporary Traffic Control Plans, when existing pedestrian facilities are disrupted, closed, or relocated in a temporary traffic control zone, temporary facilities shall be provided and they shall be detectable and include accessibility features consistent with the features present in the existing pedestrian facility.

COOPERATION OF THE CONTRACTOR

Attention is directed to the fact that the Public Service Corporations and Municipal Departments may enter the site of the improvement and alter, replace, and/or install facilities at some time when the Contractor will be prosecuting other work contiguous thereto.

PROTECTION AND RESTORATION OF PROPERTY

Special care shall be exercised by the Contractor during the prosecution of the work, to save from harm and injury any structure, public or private, water system situated above or below the surface, and adjacent properties lying within the scope of the project, not specifically designated to be removed or otherwise altered.

Any damage to private property due to the construction activities of the Contractor shall be repaired to the property owner's satisfaction within thirty (30) working days.

STREET TREES

Existing trees shall be retained unless otherwise noted on plans, and their roots protected at all times during construction.

SIDEWALKS, DRIVEWAYS AND ACCESSIBLE CURB CUTS

The Contractor shall be responsible for protection of newly placed cement concrete sidewalks, driveways, and accessible curb cuts (pedestrian curb ramps) from vandalism. The Contractor shall not be reimbursed for repairing or replacing concrete walks as a result of vandalism.

BACKFILLING FOR STRUCTURES AND PIPES

All backfilling for structures and pipes shall conform to the Commonwealth of Massachusetts Department of Transportation Standard Specification for Highways and Bridges, 2021 Edition, Section 150.64.

RETAINAGE

A Retainage of 5% shall be held by the City. This sum shall be held by the City for a period of sixty (60) days after final estimate is made and the work is accepted by the City.

All unit prices quoted herein shall be firm for the duration of the Contract, regardless of any changes in the cost of materials or labor.

CONTRACTOR'S EQUIPMENT STORAGE

Contractor's equipment is not to be parked or stored at the Public Works Yard at any time.

NOTICE TO OWNERS OR UTILITIES

Written notice shall be given by the Contractor to all public service corporations or officials owning or having charge of publicly or privately owned utilities of the Contractor's intention to commence operations affecting such utilities at least one week in advance of the commencement of such operations, and the Contractor shall, at the same time, file a copy of such notice with the City Engineer.

Bidders are hereby notified that information is available regarding the existing utility structures which may be encountered within and adjacent to the limits of the work and the corporations owning controlling same. The completeness of this list is not guaranteed by the Department.

Utility Release Abatement Measure Specifications

The majority of the Tufts Street right of way work area is located within a Massachusetts Contingency Plan (MCP, 310 CMR 40.0000) defined Disposal Site listed by the Massachusetts Department of Environmental Protection (MassDEP) Bureau of Waste Site Cleanup (BWSC) under Release Tracking Number (RTN) 3-23246. The horizontal extent of the Disposal Site within the work area is shown on the Contract Drawings. This Disposal Site is associated with a release of chlorinated volatile organic compounds (CVOC) to soil and groundwater from a former drycleaner facility located at the abutting 50 Tufts Street property. The vertical extent of this Disposal Site begins just below the pavement surface and extends to at least 10 feet below grade.

All subsurface work will be performed within the Disposal Site as a Utility Release Abatement Measure (URAM) per 310 CMR 40,0460. All soil and groundwater from the portion of the work area within the Disposal Site for RTN 3-23246 will be covered by the URAM and performed under an Environmental Health and Safety Program. The City of Somerville (City) will provide required Licensed Site Professional (LSP) services.

BOND REQUIREMENTS

A Performance Bond and a Labor and Materials Bond in the amount of 100% each of the contract price will be required from the successful bidder.

PREVAILING WAGE REQUIREMENTS

Bidders will be required to comply with the Prevailing Wage Laws, M.G.L., C.149. The selected Contractor will be required to submit a certified payroll to the City every week. The City will take an active role in reviewing and monitoring this payroll weekly. If the City suspects any violations, the City will report them to the Attorney General's Fair Labor and Business Practices Division. The Attorney General's Office, after conducting an investigation and a hearing can order the bidder to halt work, if it finds prevailing wage violations. Within fifteen days after completion of its portion of the work the bidder must submit a Statement of Compliance with the prevailing wage law. The City reserves the right to conduct hearings on bids that are significantly below the average bid price submitted on a project, to make findings of fact and determinations. Weekly payrolls are public records, and the bidder shall make them available upon request. The Bidder is required to keep these records for a period of three years from the date of the completion of this contract.

INSURANCE REQUIREMENTS

(See attached)

PARTICULAR SPECIFICATIONS

ITEMS

The items below shall conform to the Commonwealth of Massachusetts, Department of Transportation Standard Specifications for Highway and Bridges, 2023 Edition including the latest amendments and addendum thereto, except brick work as described in Item 706. and Traffic Police as described in Item 999.001.

The quantity of items listed, are approximate only. They are given as a basis for comparison of bids. The City does not expressly or by implication agree that the actual amount of work will correspond therewith. The City reserves the right to increase or decrease the quantity of any bid item.

An increase or decrease in the quantity of any items shall not be regarded as cause for an increase or decrease in the contract unit price. Contractor waives their right to renegotiate bid unit pricing based on quantity changes.

ITEM 102.511

TREE PROTECTION – ARMORING & PRUNING

EACH

ITEM 102.521

TREE AND PLANT PROTECTION FENCE

FOOT

NOTES:

1. TREE BOX RESTS ON EXISTING GRADE AND IS NOT ANCHORED TO THE GROUND.
2. SIZE OF TREE PROTECTION BOX VARIES BASED UPON TRUNK SIZE AND LIMITS OF SURFACE ROOTS. FINAL SIZE TO BE DETERMINED BY CITY URBAN FORESTER IN FIELD DURING PRE-CONSTRUCTION SITE WALK.
3. TREE PROTECTION SHALL BE INSTALLED PRIOR TO ANY CONSTRUCTION ACTIVITIES AND MAINTAINED IN GOOD CONDITION THROUGHOUT THE CONSTRUCTION PERIOD.
4. SUBMIT SHOP DRAWINGS SHOWING ALL MATERIALS AND ATTACHMENTS.
5. TREES HAVING A CALIPER UNDER 20" DIAMETER AT BREAST HEIGHT (DBH) SHALL BE WRAPPED WITH TREE PROTECTION LUMBER. "SPECIAL MATURE TREES", THOSE TREES WITH A CALIPER OVER 20" DBH, SHALL BE WRAPPED WITH TREE PROTECTION LUMBER AND PROTECTED WITH A TREE BOX. TREE BOX SHALL BE OMITTED WHEN IT IMPEDES ADJACENT SIDEWALK CONSTRUCTION OR WHEN AN ADA ACCESSIBLE PATH CANNOT BE PROVIDED AROUND IT.
6. CONTRACTOR SHALL PROTECT PRIVATE TREES, PORCHES, AND PRIVATE SIDEWALKS DURING WORK AND RESTORATION.

The work to be done hereunder consists of protecting trees in accordance with the relevant provisions of Section 100 and the following.

PART 1 – GENERAL SUMMARY

1.1 This section includes the following:

1. Provide labor, material, tools and equipment to prepare site as indicated and specified.
2. Protection of existing trees and vegetation within the limit of work. Tree Protection should be assumed for existing trees within the project limit of work where proposed construction activity is to occur beneath the canopy and within the drip lines of existing trees. Tree protection shall remain in place throughout the duration of the construction project but may be temporarily relocated to allow for work in select areas in close proximity to the trees to occur as approved by the Owner's Representative. Tree protection shall be promptly restored following these select work operations. The measures described herein are anticipated to be required and will be verified based on actual field conditions. Provisions under this item include: tree protection measures to minimize disturbance to existing trees and their root systems; canopy system review and evaluation; canopy pruning in areas of proposed disturbance; and post-pruning care including mulching and watering of root zones.

PART 2 – PRODUCTS

2.1 TREE BOX

- A. Tree Box shall be constructed from 2 in. x 4 in. lumber creating a box around the b the tree pit with 2 in. x 4 in. lumber standing straight up at the corners and wrapped with orange snow fence. Fasteners as per detail.

2.2 TREE TRUNK WRAPPING PROTECTION LUMBER

- A. Tree Trunk Wrapping Protection Lumber shall consist of 2 in. x 4 in. and 8 ft. height lumber wired together in close spacing with 16-gauge galvanized steel wire to form a protective enclosure around tree trunks. See photo examples of tree wrap protection in Section 3.6.

2.3 WOOD CHIPS

- A. Wood Chips shall conform to provisions of Wood Chip Mulch under Materials Section M6.04.3 of the MassDOT Standard Specifications.

2.4 WATER

- A. Water shall be furnished by Contractor, suitable for irrigation and free from ingredients harmful to plant life. Hose and other watering equipment required for work shall be furnished by Contractor.

PART 3 - EXECUTION

3.1 EXISTING TREES AND VEGETATION

- A. Contractor shall be responsible for the health of the existing trees in the immediate vicinity of construction. Trees damaged by construction operations which, as determined by the Owner's Representative, can be remedied by corrective pruning measures shall be addressed immediately.
- B. Public trees are protected by Massachusetts State Law, Chapter 87. Section 12 states that a fine of up to five hundred dollars, (\$500.00) per incident of damage to public shade trees can be levied. Each branch broken or improperly pruned, each improper wounding of the trunks of the trees, and each root improperly pruned shall constitute an infraction. Section 12 further provides that anyone who negligently or willfully damages a tree will be liable to the City for all damages.
- C. If the City's Urban Forester determines that a private or public property tree

cannot be repaired and restored to full-growth status, the Contractor shall replace the damaged tree(s) and pay liquidated damages as noted below.

- a. The size of the replacement tree shall equal $\frac{1}{2}$ " caliper for every 1" caliper inch of the damaged tree (size of the damaged tree shall be measured, the new tree shall be based on nursery measurements). In the case that a replacement tree of that size cannot be found or cannot be planted, a number of trees with the combined DBH of the required replacement tree may be substituted, upon approval of the City Urban Forester. The species of the replacement tree(s) shall be determined by the Engineer and the City Urban Forester.
 - b. In addition to providing a new tree replacement, Contractor shall pay City \$250.00 for every caliper inch of a damaged tree within limits of public property.
 - c. An example of the conditions stated above: A 20" caliper public tree was damaged and determined to need replacement. To remedy this situation, the Contractor would purchase and install a 10" caliper tree (or multiple trees with combined caliper inches of 10") and pay the Owner \$5,000. Type of tree and installation specifications to be determined and signed off by the City Urban Forester.
 - d. The total cost of tree replacement, including the cost of the tree and stump removal, shall be borne by the Contractor.
- D. The Contractor shall prune City and private trees within the limit of work under the direction of a Massachusetts Certified Arborist and only as required by the Engineer and with the supervision of the City's Urban Forester.
- a. If a condition is observed requiring attention, the condition should be reported to the City within 24 hours. Such conditions may include structural weakness, rot or decay that cannot be corrected by cleaning, and dead trees.
 - b. Equipment and work practices that damage living tissue and bark beyond the scope of work shall be avoided. Climbing spurs shall not be used when climbing and pruning trees. Spurs may be used to reach an injured climber or when removing a tree.
 - c. Pruning tools (e.g. chain saws, pole saws, hand saws, pole pruners, etc.) shall be sharp and regularly sharpened and maintained throughout the Contract Term.

- d. Not more than 25% of the foliage of an individual tree should be removed within an annual growing season. The percentage and distribution of foliage to be removed shall vary according to the tree species, age, health and site, in accordance with the types of pruning identified above.
 - e. Not more than 25% of the foliage of a branch or limb shall be removed when it is cut back to a lateral. The lateral shall be large enough to assume apical dominance.
 - f. Heading shall be permitted only by the expressed permission of the City, when needed to reach a defined objective.
 - g. Topping and lion tailing shall be considered unacceptable pruning practices.
 - h. All pruning cuts shall be made in accordance with the American National Standard for Tree Care Operations—Standard Practices (ANSI A300 Part 1), as approved by the American National Standards Institute, and published by the National Arborists Association (revised 2001). All terminology included in these Technical Specifications shall be defined by ANSI A300 Part 1.
 - i. When tracing wounds, only loose, damaged tissue should be removed. No other wound treatments shall be used.
- E. Roots that cannot be avoided during construction for all other trees to remain shall be carefully and cleanly cut. Only hand methods for grubbing roots will be accepted inside drip lines of trees to be left standing. All pruning of any roots greater than 2" must be completed under the supervision of the City Urban Forester. Root pruning shall include application of root treatment or fertilizer as required. In order to minimize impacts to roots, Contractor shall uncover roots with an air spade as required by the City's Urban Forester.
- F. Trucks and heavy equipment shall not pass over or park on roots of trees; nor shall construction materials, debris, or excavated material be stored within drip line of trees or within tree pits. For occasional or one time access over roots, ½-inch plywood overlapped may be used. Permeable materials such as gravel or wood chips shall be placed over root systems of trees which are not covered by hardscape and over which trucks and heavy equipment must travel during construction operations, when such travel is unavoidable, to prevent soil compaction and root damage. Material shall be replaced as needed. Contractor must have prior approval for access from the Owner's Representative or City Urban Forester.
- G. During sidewalk construction adjacent to trees, suitable soil shall be maintained within tree wells. Moist soil or mulch shall also be maintained around surface roots outside of tree wells which may become exposed during construction. Such covering shall be placed as soon as possible after roots are exposed. If roots are

going to be exposed for more than one hour, cover roots with damp burlap. Burlap shall be kept moist until most soil and mulch can be used for permanent cover.

- H. Tunneling shall be the preferred method of excavation adjacent to tree roots to avoid root pruning. If root pruning is unavoidable, a certified arborist shall be onsite to execute or oversee the operation with sufficiently sharpened hand tools and in such a fashion as to have minimum negative impact on tree health and safety.
- I. All tree protection fencing must be installed and approved by the Owner's Representative and the City Tree Warden or City Urban Forester before site preparation or other construction activity commences. Any modifications to tree protection fencing during construction can only take place with advanced written approval from the Owner's Representative and the City Tree Warden or City Urban Forester.
- J. Provide protection necessary to prevent damage to existing trees and improvements indicated to remain in place inside or outside of the limit of work. Existing trees and shrubbery to remain shall be protected from injury. Except as otherwise approved, cutting and trimming of existing tree limbs and roots will not be permitted. Existing trees to remain which can potentially be damaged by construction operations shall be protected. Trees having a caliper under 20" diameter at breast height (dbh) shall be wrapped with tree protection lumber. "Special Mature Trees", those trees with a caliper over 20" dbh, shall be wrapped with tree protection lumber and protected with a tree box. Protection shall be maintained until completion of the work of the Contractor.
- K. Protect trees on adjoining properties and within City right-of-way. Restore trees damaged by Contractor's clearing and construction activities to their original condition or better, at no additional expense to the City.
- L. Protect existing trees and other vegetation as directed by the City Urban Forester to remain in place or outside of the clearing/grading limit lines.

3.6 TREE WRAP PROTECTION EXAMPLES

ITEM 103.
TREE REMOVED – DIAMETER UNDER 24 INCHES **EACH**

ITEM 104.
TREE REMOVED – DIAMETER 24 INCHES AND OVER **EACH**

ITEM 105.
STUMP REMOVED **EACH**

The work to be done hereunder consists of removing and disposing in accordance with the relevant provisions of Section 100.

ITEM 120.1
UNCLASSIFIED EXCAVATION **CUBIC YARD**

The work to be done hereunder consists of removing and disposing in accordance with the relevant provisions of Section 120, all the materials obstructing the execution of required work as shown in the plans and as directed, except those materials for which payment is made inclusive with complete work specified to be performed under items of this contract. Concrete gutters are included under this item and any concrete bases encountered in the roadway excavation. The Contractor's attention is directed to the fact that the materials shall be disposed of in accordance with the provisions written herein before under the heading "Disposal of Surplus Materials" at no additional compensation.

ITEM 120.2
HAND AND/OR PNEUMATIC EXCAVATION **CUBIC YARD**

The work done under this item shall conform to the relevant provisions of Section 120 of the Standard Specifications. The Contractor shall perform HAND AND/OR PNEUMATIC EXCAVATION in accordance with the plans, specifications, and direction of the City of Somerville's Tree Warden.

Intent

The intent of the item is to either hand excavate or excavate with a pneumatic air device in areas where trenching or other excavation is required within the drip line of existing trees and/or excavation around gas lines, conduit, utilities and other sensitive areas. These are areas, where in the opinion of the Tree Warden, use of a backhoe or tractor would not be appropriate.

Method

Prior to beginning work, the area to be trenched/excavated shall be thoroughly wetted, 24 hours in advance, to minimize dust to the greatest extent possible. Trenching/Excavation shall be accomplished either by hand or with a pneumatic device such as an Air-Spade® CGP System, as manufactured by AirSpade, Chicopee, MA, or approved equal. The Contractor shall provide a compressor unit for operating the pneumatic excavator rated at one hundred fifty standard cubic feet per minute (150 scfm) at ninety pounds per square foot gauge (90 psfg). All pneumatic excavation shall be as minimal as possible in width and depth, thereby minimizing the impact on tree roots and other areas where the Tree Warden determines that conventional

Specifications for 2024

Complete Streets Improvements Project

Page 15 of 133

machine excavation may be detrimental. Different nozzles may be used on the air spade to expedite the work or minimize the amount of airborne material. Depth shall be as indicated on Contract Drawings or as directed by the Tree Warden. Depths greater than 18" shall require removal of soil by hand shovel, or other appropriate means. Where a pneumatic device is used, care shall be taken to avoid rocks being scattered and inadvertently damaging private or public property. In addition, operators must be equipped with adequate protective clothing and gear, in accordance with their Health and Safety Plan. All tree roots exposed by the pneumatic or hand excavation operation must be kept constantly moist with burlap covered with white plastic and checked a minimum of two (2) times a day, once in the morning and once in the afternoon, for a maximum of forty-eight (48) hours, until backfill is complete as directed by the Tree Warden. If directed, use of tree bags filled with water shall be installed to facilitate properly moist conditions.

Necessary inspections of piping shall be scheduled in advance, especially those involving inspections performed by outside Agencies.

In cases where roots must be cut, the Contractor must receive written approval from Tree Warden prior to cutting any roots larger than one inch (1") in diameter. Roots must be cut cleanly with pruning shears, loppers, or pruning saws. All root cuts must be approved by the Tree Warden prior to backfilling.

Measurement and Payment

The quantity of HAND AND/OR PNEUMATIC EXCAVATION to be paid for under this Item shall be the number of CUBIC YARDS of material excavated and backfilled, as measured in its original position, in accordance with the plans, specifications, and directions of the Project Manager.

The price bid shall be a unit price per CUBIC YARD of Hand And/Or Pneumatic Excavation and shall include the cost of all labor, materials, and equipment, and incidentals necessary for the excavation, removal and disposal of excavated material, backfilling, compacting (if under paved surfaces) and other incidental work and expenses necessary to complete the work in accordance with the plans and specifications, to the satisfaction of the Project Manager.

ITEM 141.1

TEST PIT FOR EXPLORATION

CUBIC YARD

The work under this item shall conform to the relevant provisions of Section 140 of the Standard Specifications and the following:

All test pits shall be as directed or approved by the City Engineer.

All test pits must be coordinated with the City of Somerville's Department of Public Works. A representative of the City of Somerville's Department of Public Works shall specify the location and size of the test pit and shall be present during the excavation.

The test pit shall be backfilled with City of Somerville approved gravel borrow, placed in six (6") lifts and compacted to 95% of the maximum density.

Specifications for 2024

Complete Streets Improvements Project

Page 16 of 133

Bypass pumping, sheeting/shoring, dewatering, excavation, cutting existing pavement, bedding, backfilling, dust control, appurtenances, and the removal and disposal of the existing VC sewer piping to be replaced shall be considered incidental to the work with no additional compensation provided.

Shoring shall be utilized as necessary to prevent caving of adjacent pavement. Where required proposed shoring shall be designed and stamped by a Massachusetts Registered Professional Engineer at the expense and direction of the Contractor and submitted to the Engineer for approval. Shoring submittal shall include design computations and all proposed shoring and bracing plans and details addressing all necessary construction requirements.

The hot mix asphalt used to repair and patch the road shall be considered incidental this Item. The depth of pavement repair will be determined by the City of Somerville's Department of Public Works.

The compacted Gravel Borrow used to backfill the Test Pit shall be paid under Item 151. Gravel Borrow.

ITEM 142.
CLASS B TRENCH EXCAVATION

CUBIC YARD

The work under this item shall conform to the relevant provisions of Section 140 of the Standard Specifications.

ITEM 151.
GRAVEL BORROW

CUBIC YARD

The work to be done hereunder consists of finishing and placing gravel as required and in accordance with the plans and the relevant provisions of Section 150.

Compensation for this work shall be determined only as provided in Section 150, measurement shall be made in place and 20% added to the quantity so found.

ITEM 158.1
TRENCH DAMS FOR DRAINAGE PIPE

EACH

The work to be done under this item shall conform to the relevant provisions of section 150 of the Standard Specifications.

Check Dams shall be placed a minimum of once per drainage pipe section greater than 30 feet in length within the Disposal Site Boundary as defined by the plans.

Check Dams shall be constructed from bentonite, excavatable controlled density fill or an onsite clay material as approved by the engineer and accordance with the plans.

Measurement and Payment

Check Dams will be measured and paid at the Contract unit price per each, complete in place, which price shall include all labor, materials, equipment and incidental costs required to complete the work.

ITEM 170.

FINE GRADING AND COMPACTING – SUBGRADE AREA

SQUARE YARD

These special provisions for Item 170. supersede insofar as they conflict with the requirements of Standard Specifications as amended.

The work shall consist of shaping, trimming, rolling and finishing the surfaces of gravel foundation for pavements and gravel foundation for concrete sidewalks and driveways.

The areas to be fine-graded shall be raked to remove all stones and unsatisfactory material and shall then be rolled as directed. The work shall be paid for at the contract unit price per square yard of areas fine graded, rolled and finished and the area shall be measured horizontally between the limits of grading required.

ITEM 180.01

ENVIRONMENTAL HEALTH AND SAFETY PROGRAM

LUMP SUM

The work shall consist of ensuring the health and safety of the Contractor's employees and subcontracted personnel, the environment and public welfare from any on-site chemical contamination present in air, soil, and groundwater.

The Contractor shall prepare and implement a site-specific Environmental Health and Safety Plan (EHASP) which has been approved and stamped by a Certified Industrial Hygienist (CIH) and includes the preparer's name and work experience. The EHASP shall be submitted two weeks prior to mobilization.

The EHASP shall include appropriate components required by OSHA Standard 29 CFR 1910.120(b) ("HAZWOPER") and the Massachusetts Contingency plan (MCP) 310 CMR 40.0018 and specifically 310 CMR 40.0460, must comply with all applicable state and federal laws, regulations, standards and guidelines, and provide a degree of protection and training appropriate for implementation on the project. The EHASP shall be a dynamic document with provision for change to reflect new information, new practices or procedures, changing site environmental conditions or other situations which may affect site workers and the public. The EHASP shall be developed and implemented independently from the standard construction HASP.

Health and safety procedures provided by the Contractor shall comply with all the appropriate regulations that address employee working conditions, including but not limited to standards

established by OSHA and National Institute for Occupational Safety and Health (NIOSH). Equipment used for the purpose of health and safety shall be approved by and meet pertinent standards and specifications of the appropriate regulatory agencies. All personnel handling soils, and/or groundwater within the Disposal Site associated with RTN 3-23246 shall have current OSHA 40-hour HAZWOPER training.

The most up-to-date EHASP shall always be maintained on-site by the Contractor. It shall contain the signature of each on-site Contractor and their Subcontractor employees involved with on-site activities. The employee's signature on the EHASP shall be deemed prima facie evidence that the employee has read and understands the plan. Updated copies of signature sheets shall be submitted to the Engineer.

The EHASP shall specify a Contractor Site Safety and Health Officer responsible for implementation of the EHASP and to oversee all construction activities, including handling, storage, sampling and transport, which require contact with or exposure to potentially hazardous materials.

The level of protection required to ensure the health and safety of on-site personnel will be stipulated in the EHASP. The Site Safety and Health Officer shall implement the EHASP based on changing site and weather conditions, type of operation or activity, chemical compounds identified on-site, concentration of the chemicals, air monitoring data, physical state of the hazardous materials, potential duration of exposure to hazardous materials, dexterity required to perform work, decontamination procedures, necessary personnel and type of equipment to be utilized.

During implementation of the EHASP, a daily log shall be kept by the Site Safety and Health Officer and a copy shall be provided weekly to the Engineer. This log shall be used to record a description of the weather conditions, levels of personal protection being employed, screening data and any other information relevant to on-site environmental safety conditions. The Site Safety and Health Officer shall sign and date the daily log.

MEASUREMENT AND PAYMENT

Preparation and implementation of the EHASP, including the monitoring, protection and storage of all contaminated materials, as well as subsequent modifications to the EHASP, will be measured and paid for at the Lump Sum Bid Price.

Payment of 50% of the EHASP contract price will be made upon the initial acceptance of the EHASP by the Engineer. Payment of the remaining 50% of the EHASP contract price will be made upon completion of the work. The bid price shall include preparation and implementation of the EHASP as well as the cost for its enforcement by the Site Safety and Health Officer along with any necessary revisions and updates. The work of implementing the EHASP includes work involving, but not limited to, the monitoring, protection, and storage of all contaminated materials.

ITEM 180.02

PERSONAL PROTECTION LEVEL C UPGRADE

HOUR

The work shall consist of providing appropriate personal protective equipment (PPE) for all personnel in an area either containing or suspected of containing a hazardous environment when determined to be required by the Site Safety Officer per the Environmental Health and Safety Plan.

Contingencies for upgrading the level of protection for on-site workers will be identified in the EHASP and the Contractor shall have the capability to implement the personal protection upgrade in a timely manner. The protective equipment and its use shall be in compliance with the EHASP and all appropriate regulations and/or standards for employee working conditions. Personal Protection Level C Upgrade will be measured and paid only upon upgrade to Level C and will be at the contract unit price, per HOUR, per worker, required in Level C personal protection. No payment will be made to the Contractor to provide Level D PPE.

ITEM 181.11

DISPOSAL OF UNREGULATED SOIL

TON

ITEM 181.12

DISPOSAL OF REGULATED SOIL – IN STATE FACILITY

TON

ITEM 181.13

DISPOSAL OF REGULATED SOIL – OUT-OF-STATE FACILITY

TON

ITEM 181.14

DISPOSAL OF HAZARDOUS WASTE

TON

The work under these Items shall include the transportation and off-site disposal of all excavated soils. These items shall include the storage of excavated soils in up to three roll-off containers stored on the adjacent 50 Tufts Street property as may be required to determine soil management location. It shall also include the cost of any additional laboratory analyses required by a disposal facility, identifying and obtaining acceptance at an appropriate disposal facility.

Excavation of existing subsurface materials includes contaminated soils within the Disposal Site associated with RTN 3-23246. The primary contaminants are chlorinated volatile organic compounds (CVOCs). This work will be performed as a Utility Release Abatement Measure (URAM) in compliance with the MCP. The City will provide the required LSP support services. The Contractor shall be responsible for the proper coordination of characterization, transport and disposal, recycling or reuse of contaminated soils. Disposal, recycling or reuse will be referred to as “disposal” for the remainder of this specification unless otherwise stated. However, regardless of the use of the term herein, there will be no compensation under these items for reuse within the project limits.

The Tufts Street right-of-way soils from below pavement to at least 10 feet below grade have been initially characterized as described in the Environmental Site Conditions Summary, Tufts Street Improvement Project (Atlas, May 2024). The Contractor is responsible for arranging for and coordinating the activities necessary for on-site reuse or transport and disposal of contaminated soils. Such coordination will include the Engineer and his/her designee overseeing management of contaminated materials, and the City's LSP.

Contaminated soils must be disposed of in a manner appropriate for the soil classification as described below and in accordance with the applicable laws of local, state and federal authorities. The Contractor shall be responsible for identifying a disposal facility(s) licensed to accept the class of contaminated soils to be managed and assure that the facility can accept the anticipated volume of soil contemplated by the project.

The Contractor shall be responsible for all ancillary professional services including soil sampling and analysis for this work. All sampling and analysis shall be performed in accordance with the MCP and the MassDEP's current Compendium of Analytical methods. A report shall be delivered to the Engineer outlining the material sampling methods, laboratory analysis results and proposed course of action. The Contractor will be responsible for obtaining all facility approvals and preparing all Uniform Hazardous Waste Manifests, Material Shipping Record, waste profiles etc. subject to the approval of the Engineer and City's LSP.

The Engineer and City's LSP will provide an MCP Bill of Lading. Contractor will be responsible for coordinating management facility's signature through MassDEP's eDEP submittal system. All excavated soils from within the Disposal Site for RTN 3-23246 that are not staged on an impervious surface adjacent to the excavation and placed back in the excavation the day excavated or removed from the work area for offsite management the same day shall be stored in lined roll-off containers or in stockpiles placed on and covered with polyethylene sheeting. Any stockpiles shall be covered with polyethylene sheeting at the end of each workday. Groundwater within saturated soils shall be allowed to drain back into the excavation before being moved from the work area.

CLASSES OF CONTAMINATED SOILS:

The Contractor shall provide the City's LSP with a determination that soil excavated or to be excavated is unregulated soil or contaminated soil as defined in this section. Such materials shall be given a designation for purposes of reuse or disposal based on the criteria of the Massachusetts Contingency Plan (MCP). Based on consultation with the Engineer and City's LSP, soils which are not suitable for reuse will be given a designation for purposes of off-site disposal based on the characterization data and disposal facility license/permit requirements. The Classes of Contaminated Soils are as follows:

Unregulated Soil consists of soil or fill and dredged material with measured levels of oil and hazardous material (OHM) contamination at concentrations below the applicable Reportable Concentrations (RCs) presented in the MCP and from outside the Disposal Site associated with RTN 3-23246. Unregulated soil consists of material which may be reused (or otherwise disposed) as fill within the Commonwealth of Massachusetts subject to the non-degradation

criteria of the MCP (310 CMR 40.0032(3)), in a restricted manner, such that they are sent to a location with equal or higher concentrations of similar contaminants.

Suitable facilities include licensed disposal facilities, approved industrial settings in areas which will be capped or covered with pavement or compost topsoil and seeded, and for purposes of this project should be reused as fill within the project site construction corridor whenever possible. The material cannot be placed in residential and/or environmentally sensitive (e.g., wetlands) areas. Under no circumstances shall contaminated soils be placed in an uncontaminated or less contaminated area (including the area above the groundwater table if this area shows no sign of contamination).

The Contractor shall submit to the Engineer the proposed disposal location for unregulated soils for approval. If such a disposal location is not a licensed disposal facility, the Contractor shall submit to the Engineer analytical data to characterize the disposal area sufficiently to verify that the unregulated material meets the non-degradation requirements of the MCP. In addition, the Contractor shall provide written confirmation from the operator of the proposed disposal location that they have been provided with the analytical data for both the materials to be disposed as well as the Disposal Site characterization and that s/he agrees to accept this material.

A Material Shipping Record or Bill of Lading, as appropriate, shall be used to track the off-site disposal of unregulated soil and a copy, signed by the disposal facility or property owner, shall be provided to the Engineer in order to document legal disposal of the unregulated material.

The cost of on-site disposal of unregulated soil within the project area will be considered incidental to the item of work to which it pertains.

Regulated Soil consists of materials containing measurable levels of OHM that are equal to or exceed the applicable Reportable Concentrations for the site as defined by the MCP, 310 CMR 40.0000 and/or from within the Disposal Site boundary associated with RTN 3-23246.

Regulated soil may be reused on site within the Disposal Site boundary for RTN 3-23246 provided that it meets the appropriate geotechnical criteria established by the Engineer.

Regulated Soil may be reused (as daily or intermediate cover or pre-cap contouring material) or disposed (as buried waste) at lined landfills within the Commonwealth of Massachusetts or at an unlined landfill that is approved by the MassDEP for accepting such material, in accordance with MassDEP Policy #COMM-97-001, or at a similar out-of-state facility. It should be noted that soils which exceed the levels and criteria for disposal at in-state landfills, as outlined in COMM-97-001, may be shipped to an in-state landfill, but require approval from the MassDEP Division of Solid Waste Management and receiving facility. Regulated Soils may also be recycled at a MassDEP approved recycling facility possessing a Class A recycling permit subject to acceptance by the facility and compliance with MassDEP Policy #BWSC-94-400.

Regulated Soil removed from the site for disposal or treatment must be removed via a City LSP approved Bill of Lading, Manifest or applicable material tracking form. This type of facility shall be approved/permitted by the State in which it operates to accept the class of contaminated soil in accordance with all applicable local, state and federal regulations.

Hazardous Waste consists of materials which must be disposed of at a facility permitted and operated in full compliance with Federal Regulation 40 CFR 260-265, Massachusetts Regulation 310 CMR 30.000, Toxic Substances Control Act (TSCA) regulations, or the equivalent regulations of other states, and all other applicable local, state, and federal regulations. All excavated materials classified as hazardous waste shall be disposed of at an out-of-state permitted facility. This facility shall be a RCRA hazardous waste or TSCA facility, or RCRA hazardous waste incinerator. This type of facility shall be approved/permitted by the State in which it operates to accept hazardous waste in accordance with all applicable local, state and federal regulations and shall be permitted to accept all contamination which may be present in the soil excavate. The Contractor shall ensure that, when needed, the facility can accept TSCA waste materials i.e., polychlorinated biphenyls (PCBs).

Hazardous Waste be removed from the site for disposal or treatment via a City LSP approved Uniform Hazardous Waste Manifest.

MONITORING/SAMPLING/TESTING REQUIREMENTS:

Unless already provided in the Environmental Site Conditions Summary, Tufts Street Improvement Project (Atlas, May 2024), the Contractor shall be responsible for monitoring, sampling and testing during and following excavation of contaminated soils to determine the specific class of contaminated material. Additional sampling and analysis may be necessary to meet the requirements of the disposal facility license/permit. The cost of such additional sampling and analysis shall be included in the bid cost for the applicable disposal items. The Contractor shall obtain sufficient information to demonstrate that the contaminated soil meets the disposal criteria set by the receiving facility that will accept the material.

No excavated material will be permanently placed on-site, except to return to the general location it was removed from, or removed for off-site disposal until the results of chemical analyses have been received and the materials have been properly classified. The Contractor shall submit to the Engineer results of field and laboratory chemical analyses tests within seven (7) days after their completion, accompanied by the classification of the material determined by the Contractor, and the intended disposition of the material.

WASTE TRACKING:

Copies of the fully executed Weight Slips/Bills of Lading/Manifests/Material Shipping Records or other material tracking forms received by the Contractor from each disposal facility and for each load disposed of at that facility, shall be submitted to Engineer and the City's LSP within three (3) days of receipt by the Contractor. The Contractor is responsible for preparing and submitting such documents for review and signature by the Engineer and/or City LSP or other appropriate person with signatory authority, three (3) days in advance of transporting soil off-site. The Contractor shall furnish a form attached to each manifest or other material tracking form for all material removed off-site, certifying that the material was delivered to the site approved for the class of material. If the proposed disposition of the material is for reuse within the project

construction corridor, the Contractor shall cooperate with the Engineer to obtain a suitable representative sample(s) of the material to establish its structural characteristics in order to meet the applicable structural requirements as fill for the project.

All material transported off-site shall be loaded by the Contractor into properly licensed and permitted vehicles and transported directly to the selected disposal or recycling facility and be accompanied by the applicable shipping paper. At a minimum, truck bodies must be structurally sound with sealed tail gates, and loads covered with a liner, which shall be placed to form a continuous waterproof tarpaulin to protect the load from wind and rain.

DECONTAMINATION OF EQUIPMENT:

Tools and equipment which are to be taken from and reused off site shall be decontaminated in accordance with applicable local, state and federal regulations. This requirement shall include, but not be limited to, all tools, heavy machinery and excavating and hauling equipment used during excavation, stockpiling and handling of contaminated material. Decontamination of equipment is considered incidental to the applicable excavation item.

REGULATORY REQUIREMENTS:

The Contractor shall be responsible for adhering to regulations, specifications and recognized standard practices related to contaminated material handling during excavation and disposal activities. Work within the Disposal Site boundary for RTN 3--23246 will be performed as a URAM under the supervision of the City's LSP. The City shall not be responsible at any time for the Contractor's violation of pertinent State or Federal regulations or endangerment of laborers and others. The Contractor shall comply with all rules, regulations, laws, permits and ordinances of all authorities having jurisdiction including, but not limited to, MassDEP, the U.S. Environmental Protection Agency, Federal Department of Transportation (DOT), the Commonwealth of Massachusetts and other applicable local, state and federal agencies governing the disposal of contaminated soils.

All labor, materials, equipment and services necessary to make the work comply with such regulations shall be provided by the Contractor without additional cost to The City. Whenever there is a conflict or overlap within the regulations, the most stringent provisions are applicable. The Contractor shall reimburse the City for all costs it incurs, including penalties and/or for fines, as a result of the Contractor's failure to adhere to the regulations, specifications, recognized standard practices, etc., that relate to contaminated material handling, transportation and disposal.

SUBMITTALS:

I. Summary of Sampling Results, Classification of Material and Proposed Disposal Option.

At least 1 week prior to collecting soil samples to support soil management, Contractor shall provide a soil sampling plan describing how samples will be collected, laboratory analytical methods, and data quality objective for review and approval.

Other than already provided in the Environmental Site Conditions Summary, Tufts Street Improvement Project (Atlas, May 2024) soil characterization reports must be submitted to the Engineer for review and approval within 14 days after soil analysis and prior to any disposal off-site. This requirement is on-going throughout the project duration.

Characterization reports will be submitted for all soil, and debris through the sampling and analysis program. Each report will include a site plan which identifies the sampling locations represented in the Report. The Construction Plan sheets may be used as a base plan to record this information. It will outline the material sampling methods. Sampling Results will be presented in tabular format. Each sample will be identified by appropriate identification matching the sample identification shown on the Chain of Custody Record. The sample must also be identified by location (e.g., grid number or stockpile number). For each sample, the following information must be listed: unique laboratory sample identification, the classification (unregulated, regulated, etc.), proposed disposal option for the stockpile or unit of material represented, and all analytical results.

Each characterization report will include the laboratory analytical report and Chain of Custody Record for the samples included in the Report.

II. Stockpiling, Transport, and Disposal.

At least two weeks prior to the start of any excavation activity, the Contractor shall submit the following for review and shall not begin excavation activity until the entire submittal is acceptable to the Engineer and City LSP.

Excavation and Stockpiling Protocol:

Provide a written description of the management protocols for performing excavation and stockpiling and/or direct loading for transport, referencing the locations and methods of excavating and stockpiling excavated material in accordance with Items 180.1 through 180.5.

Disposal and Recycling Facilities:

1. Provide the name, address, applicable licenses and approved waste profile for disposal and recycling location(s) where contaminated soil will be disposed. Present information substantiating the suitability of proposed sites to receive classifications of materials intended to be disposed there, including the ability of the facility to accept anticipated volumes of material.

2. Material should not be sent to facilities which are actively considered by the MassDEP, United States Environmental Protection Agency (EPA) or other responsible agency to be in violation of federal, state or local hazardous waste or hazardous material regulations. The Engineer reserves the right to reject any facility on the basis of poor compliance history.

The City will sign waste profiles, Uniform Hazardous Waste Manifests and other similar documents within 1 week of being provided, contingent upon the City's LSP review supporting their signature.

With at least 1 week's notice, and being provided required information regarding transporter and management facility, the Engineer and City's LSP will provide an MCP Bill of Lading. Contractor will be responsible for coordinating management facility's signature through MassDEP's eDEP submittal system.

MEASUREMENT AND PAYMENT

Disposal of contaminated soil shall be measured for payment by the ton of actual and verified weight of contaminated materials removed and disposed of and associated Uniform Hazardous Waste Manifest, MCP Bill of Lading, or Material Shipping Record signed by the receiving facility. The quantities will be determined only by weight slips issued by and signed by the approved disposal facility. The most cost-effective, legal disposal method shall be used.

ITEM 181.11: Disposal of Unregulated Soil shall be under the Contract Unit Price by the weight, in tons, of contaminated materials removed from the site and transported to and disposed of at an approved location or licensed facility, and includes any and all costs for approvals, permits, fees and taxes, additional testing/characterization required by the facility beyond the standard disposal test set, decontamination procedures, transportation and disposal.

ITEM 181.12: Disposal of Regulated Soil – In-State Facility shall be under the Contract Unit Price by the weight, in tons, of contaminated materials removed from the site and transported to and disposed of at an approved in-state facility, and includes any and all costs for approvals, permits, fees and taxes, testing/characterization required by the facility beyond the standard disposal test set, decontamination procedures, transportation and disposal.

ITEM 181.13: Disposal of Regulated Soil - Out-of-State Facility shall be under the Contract Unit Price by the weight, in tons, of contaminated materials removed from the site and transported to and disposed of at an approved out-of-state facility, and includes any and all costs for approvals, permits, fees and taxes, testing/characterization required by the facility beyond the standard disposal test set, decontamination procedures, transportation and disposal.

ITEM 181.14: Disposal of Hazardous Waste shall be under the Contract Unit Price by the weight, in tons, of hazardous waste removed from the site and transported to and disposed of at

the licensed hazardous waste facility, and includes any and all costs for approvals, permits, fees and taxes, testing/characterization required by the facility beyond the standard disposal test set, decontamination procedures, transportation and disposal.

ITEM 183.1

MANAGEMENT OF GROUNDWATER

LUMP SUM

This Item addresses the treatment, management, on-site re-infiltration, and disposal of groundwater generated during construction. .

The Contractor is advised that CVOC contaminated groundwater may be encountered within the portion of the work area within the Disposal Site for RTN 3-23246 during dewatering activities. The levels and nature of contamination may vary depending on location and/or depth. It will be the responsibility of the Contractor to ensure that water removed during dewatering operations is recharged to within approximately 25-feet of the location from which it is removed and in a manner that does not change groundwater flow direction or gradient outside the work area in accordance with all applicable laws and regulations and in accordance with this specification. Groundwater re-infiltration shall be completed in such a manner that does not cause migration, erosion, or sediment mounding.

The Engineer or City LSP may require re-charging to be suspended if in their opinion the above requirements are not being met.

The unpermitted discharge of dewatering effluent into the environment (storm drain, surface water body, onto the ground) is a violation of federal and state laws and regulations. If Contractor chooses to the surface or stormwater management system, approvals must be sought from the appropriate federal, state, or local regulatory jurisdiction. The EPA will not specify a treatment system or method, but normally requires that the treated discharge to a storm drain that leads to a surface water body meet Massachusetts Drinking Water Standards.

Construction Dewatering discharges to municipal storm drain system, MassDEP and EPA regulations require a National Pollutant Discharge Elimination System (NPDES) Dewatering and Remediation General Permit (DRGP) effective August 2, 2022). The application requires that operators of proposed new discharges seeking coverage under this general permit submit a Notice of Intent (NOI) to EPA. The Contractor is solely responsible for applying for and obtaining coverage under the NPDES DRGP from EPA and, MassDEP, including the costs associated with sampling and analysis of groundwater and any application fees. The Contractor is required to submit a completed copy of the NOI and DRGP to the Engineer and LSP for approval, prior to commencement of discharge.

Upon permanent cessation of the discharges authorized by the DRGP, the Contractor shall be responsible for submitting a Notice of Termination (NOT) to EPA New England within 30 days of

the permanent cessation. The Contractor is required to submit to Engineer a completed copy of the NOT within 14 days of the permanent cessation of the discharges authorized by the DRGP. All costs and fees associated with the submission of the NOT will be the responsibility of the Contractor.

The Contractor shall be responsible for adhering to regulations, specifications, and recognized standard practices related to contaminated groundwater handling during dewatering activities. Somerville shall not be responsible at any time for the Contractor's violation of pertinent local, state or federal regulations or endangerment of laborers and others. The Contractor shall comply with all rules regulations, laws, permits and ordinances of all authorities having jurisdiction including, but not limited to, MassDEP, the, Massachusetts Water Resources Authority (MWRA), the Commonwealth of Massachusetts and other applicable local, state and federal agencies governing this work.

The Contractor shall be responsible for determining compliance with the requirements of any permit and for any sampling, testing, and disposal required in connection with said permits. The City reserves the right to collect additional samples of dewatered groundwater to determine the contractor's compliance with the Permit's requirements. All laboratory testing is to be performed by a MassDEP certified laboratory for all parameters being tested. Copies of all field and laboratory testing results, reports, etc. required by the permits must be supplied to the Engineer. MassDEP and the permit-granting agency, where applicable, reserve the right to collect additional samples of discharged groundwater to verify compliance with permit requirements.

The bidder shall factor into the payment item all costs associated with infiltration. Bid price shall also include full compensation for labor, materials, maintenance, mobilization, rental and other related costs. Item 183.2 will be used for disposal of used granular-activated carbon canisters.

SUBMITTALS:

At least two (2) weeks prior to initiating work, the Contractor shall submit an excavation dewatering plan for review and approval that includes a detailed description of the approach to dewatering, a description of methodology for limiting the need to dewatering and re-infiltration. If treatment is anticipated, discharge points, sampling frequency, required permits, transporters and waste facilities complete with license numbers, permit numbers, contact person, and address and telephone number that the Contractor plans to utilize for waste disposal. The plan shall be submitted for the record.

If performed, the contractor shall provide all groundwater sampling and analyses, results and reports required by all applicable local, state and federal agencies, if any. The Contractor shall submit to the Engineer for review all plans and documents that must be submitted to the EPA and MassDEP, potential treatment system analytical reports and correspondence. Copies of all permits and approvals and lab analyses and test results associated with groundwater treatment

and/or disposal must be submitted to the Engineer within 3 days of receipt by the Contractor, if any.

MEASUREMENT AND PAYMENT

Payment shall be made at the Lump Sum basis and will cover all work associated with dewatering and re-infiltration, and if performed all groundwater treatment and testing required by discharge permits and regulatory requirements, which price shall be full compensation for all necessary labor and materials, mobilization, maintenance, demobilization of the appropriate unit(s), freight, rental costs, field and laboratory testing costs and permits.

ITEM 201.5

CATCH BASIN – MUNICIPAL STANDARD

EACH

The work to be done under this Item shall consist of the furnishing and installation, including excavation and backfill of trenches for catch basins, at the locations established by the Engineer, all in accordance with Section 201 of the Standard Specifications and the following:

Catch Basins shall conform to City of Somerville Construction Standards.

Catch basin may have a cover instead of a grate if receiving flow from a drop inlet, as directed by Engineer.

ITEM 202.01

MANHOLE – MUNICIPAL STANDARD

EACH

The work to be done under this Item shall consist of the furnishing and installation, including excavation and backfill of trenches for manholes, at the locations established by the Engineer, all in accordance with Section 201 of the Standard Specifications and the following:

Manholes shall conform to City of Somerville Construction Standards. Frames and covers shall be City of Somerville style, all conforming to City of Somerville Construction Standards.

ITEM 206.01

DROP INLET – MUNICIPAL STANDARD

EACH

The work to be done under this Item shall consist of the furnishing and installation, including excavation and backfill of trenches for drop inlets, at the locations established by the Engineer, all in accordance with Section 201 of the Standard Specifications and the following:

Drop inlets shall conform to City of Somerville Construction Standards.

Drop inlets may only discharge to a catch basin. The receiving catch basin often has a cover instead of a grate.

**SUBJECT: Contained-In Determination
Soil from Tufts Street Right-of-Way Improvements
Somerville, MA
RTN 3-51811
Atlas Project No.: 6000007464**

Dear Program Manager:

Atlas Technical Consultants LLC (Atlas) has been retained by the City of Somerville to provide Massachusetts Contingency Plan (310 CMR 40.0000)(MCP) and related Licensed Site Professional (LSP) services to support the Tufts Street Improvement Project. On behalf of the City of Somerville, I have made a "contained-in" determination (CID) following the approach presented in the Massachusetts Department of Environmental Protection's (MassDEP) Technical Update, Considerations for Managing Contaminated Soil: RCRA Land Disposal Restrictions and Contained-In Determination (2010) regarding soil from a portion of the following M.G.L. c. 21E disposal site:

Release Tracking Number:	3-51811
Site Name:	Tufts Street Right-of-Way Improvements
Street Address:	Tufts Street right-of-way from Cross Street to Washington Street
City/Town:	Somerville, MA
Zip Code:	02145

The soil contained the listed hazardous waste(s) with Waste Codes U043, U210 and U228, which MassDEP is authorized to regulate under the Resource Conservation and Recovery Act (RCRA) by the U.S. Environmental Protection Agency (USEPA). However, the soil (check one):

- ☒ Met all applicable S-1 standards upon removal*; or
☐ Was treated through a method of treatment other than dilution so as to meet all applicable S-1 standards.

*The soil noted herein has been pre-characterized in-situ and has been determined to meet applicable S-1 standards.

The levels of the listed hazardous waste constituents in the soils to be generated are:

Summary of Detected Listed Waste within Contained-In Determination						
Sample Name / Depth	Sample Date	Substance/CAS # / Waste Code	Results (ppm)	MCP Method 1S-1 Standards		
				S-1 Soil & GW-1	S-1 Soil & GW-2	S-1 Soil & GW-3
ATC-8, 5-10'	3/14/24	Tetrachloroethylene (PCE) / 127-18-4 / U210	0.134	1 ppm	4 ppm	100 ppm
50Tuft-B101, 0-1'	2/12/24		0.0023			
50Tuft-B101,3 - 5'	2/12/24		0.015			
50Tuft-B102, 0-1'	2/12/24		0.00048			
50Tuft-B102, 1-3'	2/12/24		0.001			
50Tuft-B104, 0-1'	2/12/24		0.023			
50Tuft-B104, 1-3'	2/12/24		0.015			
50Tuft-B105, 0-1'	2/12/24		0.81			
50Tuft-B105, 1-3'	2/12/24		0.01			
50Tuft-B102, 1-3'	2/12/24	Trichloroethene (TCE) / 79-01-06 / U228	0.00037	0.3	0.3	30
50Tuft-B105, 0-1'	2/12/24	Vinyl Chloride / 75-01-04 / U043	0.053	0.3	0.3	0.3

The City of Somerville Tufts Street Improvement Project is to implement traffic calming and accessibility improvements that will reconstruct sidewalks, install new raised stormwater inlets drains to improve the existing stormwater management system, and repave Tufts Street between Cross Street and Washington Street as part of the City's Pavement and Sidewalk Management Program. Most excavations will be limited to 3 feet below grade with some excavations for drainage structure connections / rehabilitations extending to 5 feet below grade. Groundwater has been observed to range from approximately 7 to 13 feet below grade in the majority of the area where excavation will occur. To the extent practicable, soil will be reused in the area from which it was excavated. The limit of work is shown on attached **Figures 1 and 2**.

Most work is located within a Disposal Site listed by the MassDEP under Release Tracking Number (RTN) 3-23246. **Figure 1** shows the northern extent of the Disposal Site as it relates to limits of work and all the proposed work shown on **Figure 2** is within the Disposal Site. This Disposal Site is associated with a release of tetrachloroethylene, also known as perchloroethylene (PCE), to soil and groundwater from a former drycleaner facility located at the abutting 50 Tufts Street property. Based upon a review of reports submitted to MassDEP for RTN 3-23246 Atlas concludes that the vertical extent of this Disposal Site begins just below the pavement surface and extends to at least 10 feet below grade.

On March 14 and 15, 2024, Atlas supervised the installation of 8 soil borings identified as ATC-1 to ATC-8 for sampling and laboratory analyses of soil to conduct in-situ pre-characterization of soil within the Tufts Street right-of-way. Locations were selected to reflect areas where soil excavation was proposed to support planned work. Soil borings ATC-4 to ATC-8 are located within the Disposal Site. Soil boring ATC-3 is located at the approximate northeast edge of the Disposal Site and borings ATC-1 and ATC-2 are located outside the Disposal Site. Two soil samples from each boring, for a total of sixteen (16) soil samples, were collected. At each boring location, a discrete soil sample was collected by hand auger during preclearing from 0 to 5 feet below grade and using a dedicated acetate liners using a Geoprobe drill rig from 5 to 10 feet below grade surface. Soil boring locations are shown on **Figures 1 and 2**.

Soil samples from each boring were screened for total volatile organic compounds (VOCs), i.e., headspace, with a pre-calibrated photoionization detector (PID) in accordance with the MassDEP jar headspace method.

The soil samples were placed in laboratory provided containers and submitted to Eurofins laboratory under a chain of custody and analyzed for low level volatile organic compounds (VOCs) by EPA Method 8260.

Two sets of composite soil samples were collected from the 8 soil borings. One set (ATC-1 to ATC-8 Composite 0-5') was from the 0 to 5 feet below grade interval and the other set (ATC-1 to ATC-8 Composite 5-10') was from 5 to 10 foot below surface interval. These samples were placed in properly preserved laboratory provided containers and submitted to Eurofins laboratory under a chain-of-custody for the following analyses typically required by soil management facilities:

- Semi-VOCs with low level PAHs (SIMS) by EPA Method 8270;
- PCBs by EPA Method 8082;
- RCRA 8 Metals; TCLP lead;
- Total Petroleum Hydrocarbons by 8100; and
- Corrosivity; Total Organic Carbon; Flashpoint; Reactivity Cyanide and Sulfide; and Conductivity.

The soil analytical results were non-detect for all VOCs at 15 of 16 samples. Only PCE at 0.0314 milligrams per kilogram (mg/kg) was detected in soil boring ATC-8 at 5-10 feet below grade surface. The soil analyses do not exhibit any hazardous waste characteristics pursuant to 310 CMR 30.120. All detected compounds reported were below their MCP Method 1 Standards as were the detection limits for those compounds not detected. A summary of VOC soil data is presented in attached **Table 1**. The associated laboratory report is attached.

Atlas reviewed previous submittals and associated soil data made to the MassDEP for the following RTNs associated with 50 Tufts Street or in the immediate area for data relevant to this CID:

- RTNs 3-23246 / 3-24358 / 3-26114 / 3-35528 for 50 Tufts Street;
- RTNs 3-28231 / 3-30620 associated with MBTA/Green Line Extension work in the area;
- RTN 3-37468 for 31 Tufts Street associated with impacts from 50 Tufts Street; and
- RTN 3-14792 for 60 Tufts Street associated with asbestos only.

Relevant data from soil samples collected near the Tufts Street right-of-way are included on **Table 1** and the summary table above. Due to the age of the original VOC release associated with 50 Tufts Street, completed and ongoing remediation and/or Exposure Pathway Mitigation Measures (EPMM) at 23, 27, 31, 50, and 60 Tufts Street as well as 121 Washington Street, soil data more than 10 years old is not considered representative of current site conditions and was not included in the data summary tables. EPMMs include Active Exposure Pathway Mitigation Measures (AEPMM) and passive subslab venting systems. Furthermore, data was excluded if it was from more than 10 feet below grade or there was more recent data available between it and the right-of-way.

Based upon the above, the only relevant soil data for this CID was found in the Phase V Status Report No. 26 and Remedial Monitoring Report No. 41, 50 Tufts Street (GEI Consultants, Inc., August 2024). This submittal documents how on February 12, 2024, GEI collected shallow soil samples to the northwest and southeast of the 50 Tufts Street building, adjacent to street improvement work zone from 5 soil borings (B101 to B105) advanced up to 5 feet below grade. These soil boring locations are shown on **Figures 1 and 2**. Based upon the detected PCE and vinyl chloride concentrations all being below all their Method 1 Soil Standards as supported by the information presented herein, these soils are eligible for a CID.

Soil data from samples collected from B103 0-1' and B103 1-3' exhibit concentrations of PCE above its Method 1 Standards. Therefore, additional assessments will be performed in the area shown on **Figures 1 and 2** before these soils are managed under this CID. It is estimated that approximately 50 tons (35 CY) of soil will be excavated from the area around B103. In the immediate area of B103, excavation will be limited to what is required to reconstruct the existing sidewalk. The soil may be further characterized as work progresses to see if it meets this CID requirements. This will involve collecting soil samples from excavations in this area and submitting for laboratory CVOC analysis. A soil sample will be collected from the excavation area as work progresses at a rate

of no more than every 15 CY. If the reported CVOC concentrations in a sample are all less than their MCP Method 1 S-1/GW-1/GW-2/GW-3 Standards, the CID will be applicable to the soil represented by this sample.

A summary of VOC soil data identified by Atlas as relevant to this CID is presented in attached **Table 1** and included in the table above. The associated data summary table, figure and laboratory report from GEI's 2024 report previously submitted to MassDEP is also attached.

The soil management activities associated with this CID Petition will be conducted as a Utility-related Release Abatement Measure (URAM) under **RTN 3-51811**. The contract documents for the work estimate that up to 520 tons (approximately 375 cubic yards) of soil will require offsite management from the area represented by the soil data presented herein and covered by this CID, with the potential for an additional 50 tons (35 cubic yards) from around B103 if supported by data collected as work progresses. As noted above, most excess soil will come from less than 3 feet below grade with limited areas where stormwater catch basins are being replaced extending to 5 feet below grade. None of these deeper areas are located adjacent to the area excluded from this CID.

I understand that this "contained-in" determination is subject to a 21-day period during which the determination is subject to review by the MassDEP and that the soil cannot be managed as non-hazardous waste until the 21-day review period passes without objection from MassDEP or USEPA. A copy of the validated and unsigned BWSC-126 Miscellaneous Document Transmittal Form submitted concurrently with this CID is **Attached**.

I also understand that if the soil is to be transported out-of-state, it must first be determined if the operator of the landfill or other receiving facility and the relevant state agency (or the relevant USEPA region, if the state does not administer the RCRA program) are willing to accept contained-in determinations performed by a Massachusetts Licensed Site Professional. In doing so, the process by which "contained-in" determinations are performed in Massachusetts will be explained to the relevant parties and proper documentation of all conversations will be retained.

I, Michael Gitten, attest under the pains and penalties of perjury (i) that I have personally examined and am familiar with the information contained in this submittal, including any and all documents accompanying this submittal, (ii) that, based on my inquiry of those individuals immediately responsible for obtaining the information, the material information contained in this submittal is, to the best of my knowledge and belief, true, accurate and complete, and (iii) that I am fully authorized to make this attestation on behalf of the person or entity legally responsible for this submittal. I/the person or entity on whose behalf this submittal is made am/is aware that there are significant penalties, including, but not limited to, possible fines and imprisonment, for willfully submitting false, inaccurate or incomplete information.

Respectfully submitted,
ATLAS

NOTES:

1. ALL UTILITY STRUCTURES AND GATE BOXES SHALL BE ADJUSTED TO FINAL GRADE.
2. EXIST TREES AND PITS CALLED TO BE REMOVED SHALL BE REPLACED WITH CEM CONC WALK.
3. AT ALL PROP LOAM AND SEED LOCATIONS, REMOVE EXISTING SUBBASE TO 6" BELOW FINISH GRADE AND REPLACE WITH LOAM FOR ROADSIDES.
4. REMOVE ALL EXISTING TREES UNLESS OTHERWISE NOTED ON PLAN.
5. TREE ROOTS OF ALL TREES TO REMAIN MUST BE PROTECTED DURING CONSTRUCTION. CONTRACTOR TO WORK WITH CITY TREE WARDEN OR CITY ARBORIST TO DETERMINE IF THE CURBING IN FRONT OF ANY TREE TO REMAIN WILL STAY IN PLACE OR CAN BE REMOVED.
6. PROVIDE MINIMUM 36" BETWEEN BENCHES FOR ADA COMPLIANCE. ENGINEER TO CONFIRM FINAL LOCATIONS.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: TUFTS STREET
Project Number: 045163

Lab Number: L2408101
Report Date: 02/21/24

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

MCP Related Narratives

Volatile Organics

L2408101-06: Initial calibration utilized a quadratic fit for: 1,1-dichloropropene

L2408101-06D: A copy of the continuing calibration standard is included as an addendum to this report.

In reference to question G:

L2408101-06, -07, and -12: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The WG1887347-5 Method Blank, associated with L2408101-06, has a concentration above the reporting limit for chloroform. Since the associated sample concentration is either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any result detected below the reporting limit is qualified with a "B".

L2408101-01, -02, -03, -04, -05, -07, -08, -09, -10, -11, -12, and -13: Initial Calibration did not meet:

Lowest Calibration Standard Minimum Response Factor: bromochloromethane (0.0979), bromodichloromethane (0.2758), 1,4-dioxane (0.0014), cis-1,3-dichloropropene (0.2950), 1,1,2-trichloroethane (0.1932)

Average Response Factor: 1,4-dioxane

Verification: carbon disulfide (69%)

L2408101-06: Initial Calibration did not meet:

Lowest Calibration Standard Minimum Response Factor: 1,4-dioxane (0.0018)

Average Response Factor: 1,4-dioxane

L2408101-01, -02, -03, -04, -05, -06, -07, -08, -09, -10, -11, -12, and -13: The associated continuing calibration standard is outside the acceptance criteria for several compounds; however, it is within overall method allowances. Associated results are considered to be biased high if the %D is negative and biased low if the %D is positive. A copy of the continuing calibration standard is included as an addendum to this report.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name: TUFTS STREET
Project Number: 045163

Lab Number: L2408101
Report Date: 02/21/24

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name: TUFTS STREET
Project Number: 045163

Lab Number: L2408101
Report Date: 02/21/24

Data Qualifiers

- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Compound	Ave. RRF	RRF	Min RRF	%D	Max %D	Area%	Dev(min)
n-Butylbenzene	2.586	2.799	-	-8.2	20	128	0
1,2-Dichlorobenzene	1.614	1.655	-	-2.5	20	115	0
1,2,4,5-Tetramethylbenzene	3.095	3.243	-	-4.8	20	118	0
1,2-Dibromo-3-chloropropan	0.129	0.11	-	14.7	20	96	0
1,3,5-Trichlorobenzene	1.334	1.538	-	-15.3	20	133	0
Hexachlorobutadiene	0.659	0.762	-	-15.6	20	142	0
1,2,4-Trichlorobenzene	1.16	1.318	-	-13.6	20	129	0
Naphthalene	2.342	2.244	-	4.2	20	106	0
1,2,3-Trichlorobenzene	1.043	1.121	-	-7.5	20	121	0

* Value outside of QC limits.

ANALYTICAL REPORT

PREPARED FOR

Attn: Stephan Landry
Atlas Technical Consultants LLC
10 State St
Suite 100
Woburn, Massachusetts 01801

Generated 4/3/2024 2:47:08 PM Revision 1

JOB DESCRIPTION

Tufts Street Improvement - Somerville, M

JOB NUMBER

620-17450-1

Eurofins New England

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Authorization

Authorized for release by
Agnes Huntley, Project Manager

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

MassDEP Analytical Protocol Certification Form

Laboratory Name: Eurofins New England

Project #: 620-17450-1

Project Location: Tufts Street Improvement - Somerville, M

RTN:

This Form provides certifications for the following data set: list Laboratory Sample ID Number(s):
620-17450-1 through 620-17450-18

 Matrices: ☒ Groundwater/Surface Water ☒ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below:)

8260 VOC CAM II A ☒	7470/7471 Hg CAM III B ☒	MassDEP VPH (GC/PID/FID) CAM IV A ☐	8082 PCB CAM V A ☒	9014 Total Cyanide/PAC CAM VI A ☐	6860 Perchlorate CAM VIII B ☐
8270 SVOC CAM II B ☒	7010 Metals CAM III C ☐	MassDEP VPH (GC/MS) CAM IV C ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
6010 Metals CAM III A ☒	6020 Metals CAM III D ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐

Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☒ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☒ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☒ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☒ Yes ☐ No
E	VPH, EPH, APH, and TO-15 only a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☒ Yes ☐ No

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☒ Yes ☐ No ¹
----------	---	--

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	☐ Yes ☒ No ¹
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☒ No ¹

¹ All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, is accurate and complete.

Job Narrative 620-17450-1

REVISION

The report being provided is a revision of the original report sent on 3/28/2024. The report (revision 1) is being revised due to Report revised as client needed full list 8270 with low-level PAHs.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 3/18/2024 3:25 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.4°C.

GC/MS VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

Method 8270MCP: The following analytes have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: Benzidine and Benzoic acid. These analytes may have a %D >50%.

Method 8270MCP: The laboratory control sample (LCS) for preparation batch 620-32927 and analytical batch 620-32951 recovered outside control limits for the following analytes: 4-Chloroaniline, Aniline, Benzidine, Benzoic acid and Pyridine. The affected target analytes recovered within acceptance limits, >10%, per MCP criteria therefore, demonstrates the analytical system had sufficient sensitivity to detect the compounds had they been present. Since the affected target compounds were not detected in the samples, the data have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 6010MCP: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 620-33090 and analytical batch 620-33178 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010MCP: The sample duplicate (DUP) precision for preparation batch 620-33090 and analytical batch 620-33178 was outside control limits. Sample non-homogeneity is suspected.

Method 6010MCP: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 620-33090 and analytical batch 620-33178 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins New England

Case Narrative

Client: Atlas Technical Consultants LLC

Job ID: 620-17450-1

Job ID: 620-17450-1 (Continued)

Eurofins New England

General Chemistry

Method 1010A: The Pensky Martens closed cup apparatus is designed to determine the flash point of a liquid sample. The sample submitted could not be mixed well enough to obtain uniform heating. The temperature being measured was that of the material near the top of the cup. The material at the bottom of the cup could have a higher temperature. The temperature reported may not be accurate.

Method Moisture: The sample duplicate (DUP) precision for analytical batch 620-32837 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Atlas Technical Consultants LLC
Project/Site: Tufts Street Improvement - Somerville, M

Job ID: 620-17450-1

Laboratory: Eurofins New England

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Massachusetts	State	M-RI907	06-30-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
6010D	3010A	Solid	Lead
6010D	3050B	Solid	Arsenic
6010D	3050B	Solid	Barium

Question	Answer	Comment
Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
